SECTION II - CONTRACT OF CROP INSURANCE

The Manitoba Crop Insurance Corporation

Contract of Crop Insurance

(Crop year under this Contract means the 1st day of April through to the 31st day of March immediately following.)

Date Issued____________________ Policy__________

THE CORPORATION

THE MANITOBA CROP INSURANCE CORPORATION (hereinafter referred to as "the Corporation"), subject to The Crop Insurance Act and the regulations made thereunder, does hereby contract with:

THE BASIS OF INSURANCE

to pay to the said Insured: (a) if the actual yield of the insurable crop by reason of one or more designated perils, falls below the total established percentage of the long term average yield of average grade, the established price for each entire tonne of insurable crop by which the actual yield is less than such established percentage, and where the hail spot loss option has been added to the coverage, subject to the spot loss provisions below, the percentage of spot loss coverage per acre which is the same as the percentage of loss or damage per acre covered aforesaid, and (b) in the case of unseeded acreage insurance, the insured sum per acre on the insured acres for unseeded acreage for loss by reason of the inability to seed a crop in that crop year due to excessive moisture on that portion of such acres, in accordance with the terms hereof.

PREMIUMS
Due Date
Rates

PREMIUMS shall be due and payable upon receipt of the statement of insurance by the Insured and the premium shall be based on the rates as prescribed by regulation under The Crop Insurance Act and calculated by relating such rates to the crop actually seeded.

Interest

INTEREST will be payable on such premium or any portion thereof from the 1st day of September until paid at the rate equivalent to one percentage point greater than the prime interest rate of the Bank of Canada as of the 1st day of June for the crop year for which the premium is due.

TERMS AND CONDITIONS

REGULATIONS AND THE CONTRACT

1. In this Contract, expressions and words have the same meaning as defined in The Crop Insurance Act and the regulations made thereunder.
2. The provisions of The Crop Insurance Act and the regulations made thereunder shall apply to the within Contract, where applicable.

INSURABLE HAZARDS

3. The insurance provided is against loss or damage by reason of hail, drought, excessive moisture, excessive rainfall, flood, frost, wind including tornado, disease including rust and pests.

INSURED'S RESPONSIBILITY

4. Where an Insured in his application for insurance and/or seeded acreage report, falsely describes the nature of, location of and/or acreage of, his insurable crop to the prejudice of the Corporation, or knowingly misrepresents or fails to disclose any facts required to be stated, the insurance, or such part as may be designated by the Corporation, may be void for the crop year

during which the misdescription, misrepresentation or omission is made, but the premium paid for such year shall have been deemed to be earned by the Corporation.

CHANGES IN INSURANCE

5. No term or condition of this Contract shall be deemed to have been waived or altered by the Corporation, unless the waiver or alteration is expressed in writing and signed by a duly authorized representative of the Corporation.

SEEDED ACREAGE REPORT AND INSURED'S RESPONSIBILITY

ENTIRE ACREAGE

6. (1) (a) The seeded acreage report shall be the basis upon which the crop is insured and the basis upon which any loss will be adjusted and paid. Subject to the terms hereof, the total acres of each insured crop actually seeded must be insured and indicated as such on the seeded acreage report.

CHANGE IN COVERAGE

Final date for changes

Final date for changes in forage and fall rye

Final date for unseeded acreage changes

(b) Changes in the selection of crops insured, dollar selection, application for separate units and hail spot loss option in any year must be made on or before the 30th day of April, except for changes or applications with respect to fall rye and forage crops for hay production, in which case any changes or such application must be made on or before the 31st day of August in the year in which the fall rye is seeded, or in the case of forage crops for hay production, in the year prior to the year in which the coverage is to apply, and except for changes or applications with respect to unseeded acreage, in which case any changes or such applications must be made on or before the 31st day of March 1986, for the 1986 crop year and on or before the 31st day of August 1986, for the 1987 crop year.

Final date for submitting seeded acreage reports

failure to file seeded acreage report

fee for declaring acres

(c) The seeded acreage report to be filed in each year shall be forwarded to the Corporation by each Insured within 10 days immediately following completion of seeding, but in any case must be filed and received by the Corporation by the 30th day of June. Even if the Insured does not seed an insurable crop, he shall file a seeded acreage report so indicating. If the Insured fails to submit a seeded acreage report by these dates, the Corporation may elect to determine the insured acreage and the coverage thereon, or may declare the insured acreage to be "zero" with respect to the crop for which the acreage was not filed. Upon such determination of insured acreage, a fee of $30.00 may be payable by the Insured in addition to any other amounts payable.

LANDLORD INSURANCE

(d) If the Insured is a landlord, the kinds of crops, the dollar selection and hail spot loss option must coincide with that selected by the tenant(s) and any changes the tenant(s) may make are also binding on the landlord. The landlord agrees to be bound by the information contained in the seeded acreage report filed by the tenant as it relates to such landlord's land.

SEEDED ACREAGE REPORT FILING FEE AND DEADLINE

(e) A $20.00 filing fee may be charged if the seeded acreage report is not filed and received on or before the 30th day of June.

CULTIVATED ACRES FOR UNSEEDED ACREAGE INSURANCE

(f) In the case of unseeded acreage insurance, total cultivated acres, as defined in the regulation for unseeded acreage insurance, must be declared on or before the 30th day of April. If the total cultivated acres are not declared then the crop acreage reported on the seeded acreage report will be taken as the total insurable acres and a premium charged accordingly. In these cases, no indemnity will be paid because the Corporation will consider that all acres which were insurable have been seeded.

DATES OF SEEDING CROPS

(2) Dates for Seeding. No coverage is provided for any portion of a crop that is seeded later than the specified date of

each crop as follows:

May 25 - Fababeans, and grain corn in Corn Area "B".
June 1 - Grain Corn in Corn Area "A", lentils, and field beans in Field Bean Area "B".
June 5 - Late maturing varieties of potatoes, and field beans in Field Bean Area "A".
June 10 - Sunflowers, field peas, Argentine type rapeseed in Rapeseed Area "B", silage corn, canary seed and triticale.
June 15 - Sugar beets, early maturing varieties of potatoes, and Argentine type rapeseed in Rapeseed Area "A".
June 20 - Red spring wheat, utility wheat, durum wheat, oats, barley, flax, mustard, mixed grain, buckwheat in Buckwheat Area "B", and Polish (turnip) rapeseed in Rapeseed Area "B".
June 25 - Buckwheat in Buckwheat Area "A", and Polish (turnip) rapeseed in Rapeseed Area "A".
September 25 - Fall rye.

NUMBER OF CROPS FOR INSURANCE

(3) Except for sugar beets, potatoes or forage crops for hay production which may be singly insured, no coverage is provided unless the Insured has agreed to insure two kinds of insurable crops.

ACRES REQUIRED FOR INSURANCE

(4) Except for sugar beets, potatoes or forage crops for hay production, no coverage is provided if the total acreage of crops insured is less than 50 acres, unless all insurable crops planted by the Insured are insured and the total acreage of such insurable crops is not less than 10 acres. No coverage is provided if only a potato crop is insured and less than 4 acres of potatoes are planted, or if only a sugar beet crop is insured and less than 3 acres of sugar beets are planted, or if only forage crops for hay production are insured and less than 5 acres of forage crops for hay production are eligible for insurance.

VOLUNTEER CROPS

(5) Volunteer crops are not insured.

PESTICIDES

(6) No coverage is provided for loss or damage caused by pesticides.

MIXED GRAIN INSURANCE

(7) Coverage is provided for mixed grain consisting of wheat, oats, barley and field peas, in combination, or any two or more of these insurable crops comprising the mixture and if the major component thereof does not exceed eighty per cent (80%) thereof.

FIRST STAGE ADJUSTMENTS

7. First Stage Adjustments. Where loss or damage occurs to an insured crop on or before the 25th day of June of the year in which the crop is to be harvested, from one or more of the causes covered by this Contract and subject to the reseeding provision specified in subsection (a) of section 7, then, providing the Corporation permits in writing the crop to be destroyed following adjustment, the insurance for such year shall be deemed to be cancelled upon such portion of the accepted acreage on which the claim is made and such acreage put to other use. In such case, the first stage adjustment will be allowed upon the portion of the accepted acreage on which the claim is made except as outlined in subsection (a) of section 7. Where such acreage is not the entire insurable acreage of that crop in that year, this adjustment will be taken into account on a final adjustment at the end of the crop year to determine if the actual yield of the crop insured is less than the established percentage of the long term average yield.

1st stage on fall rye

First stage adjustment commences immediately following seeding except in the case of fall rye, for which first stage adjustment will be allowed only after the 1st day of January of the year in which the rye crop is to be harvested.

1st STAGE COVERAGE *Sugar beets*

First stage adjustment means fifty per cent (50%) of coverage, except in the case of sugar beets Stage 1(a) means thirty per cent (30%) (not thinned), Stage 1(b) means fifty per cent (50%) (thinned) and Stage 1(c) means forty per cent (40%) (beets planted to stand) of coverage.

INSURANCE ON RESEEDED CROPS

(a) First stage adjustment will not apply when reseeding takes place to the same crop which has been seeded by the final seeding date for such crop, and the existing coverage will continue on that reseeded crop.

INSURABILITY OF RESEEDED CROP

(b) The reseeded crop is insured if it has been selected for insurance and provided it satisfies all other terms and conditions of this Contract.

CALCULATING 1st STAGE INDEMNITY

(c) Should the insurable crop be destroyed with the consent of the Corporation, and upon adjustment it be determined that there is an excess of over first stage coverage in the case of a first stage adjustment, then such excess shall be deducted from the amount of any indemnity as determined upon final adjustment.

RESEEDING BENEFIT

(d) Reseeding Benefit.

Coverage

(i) Following an inspection on or before the 25th day of June, a benefit for reseeding equivalent to twenty-five per cent (25%) of the full coverage per damaged acre of that crop for each acre reseeded shall be paid, except in the case of sugar beets which shall be fifteen per cent (15%), provided that the destroyed acreage is reseeded on or before the final date of seeding for that kind of crop reseeded and that kind of crop has been selected as an insured crop.

In the case of fall rye reseeded to fall rye on or before the final date of seeding for fall rye (25th day of September) of the same year and subject to the conditions contained herein, a reseeding benefit of twenty-five per cent (25%) will be paid. In the case where fall rye is reseeded to another insured crop on or before the 25th day of June of the crop year in which the fall rye was to be harvested, a reseeding benefit of twenty-five per cent (25%) will be paid subject to the conditions contained herein.

(ii) The reseeding benefit will apply only if the inspected damaged crop is destroyed or worked down by tillage or herbicide application, except in cases where overseeding may be allowed at the option of the Corporation.

(iii) The reseeding benefit will not apply when the appraised yield of the inspected damaged crop is equal to or greater than the long term average yield for that kind of crop for the soil productivity designation on which such crop was planted.

(iv) Following reseeding, the crop reseeded as in (i) above, shall be insured to the same extent as if it had been originally seeded; provided that the total payments for damage to an insured crop which is reseeded to the same crop cannot exceed the original total insurance coverage for that kind of crop in that year.

(v) Any reseeding benefit paid shall be deemed to have earned a premium as prescribed.

(vi) For the reseeding benefit to apply, the reseeded acreage must be in no less than twenty (20) acre blocks in the case of all insured crops except sugar beets and potatoes which must be in no less than ten (10) acre blocks unless in all cases the destroyed acreage is the total acreage of that crop in that field.

(vii) Such reseeding benefit shall be paid only once on the same acreage in the same year.

SECOND STAGE UNHARVESTED *date applies*

(e) Second Stage Adjustment (unharvested). After the 25th day of June, second stage adjustment (unharvested) will apply.

coverage

(i) Second stage adjustment (unharvested) means one hundred per cent (100%) of coverage except in the case of sugar beets Stage 2(a) means forty per cent (40%) (not thinned) of coverage and Stage 2(b) and 2(c) means sixty per cent (60%) (thinned or planted to stand) of coverage, and in the case of potatoes, second stage means seventy-five per cent (75%) of harvested coverage.

coverage following adjustment

(ii) Where loss or damage occurs to the insured crop after the date after which second stage adjustment applies as set out for that particular kind of crop from one or more of the causes covered by this Contract, then, providing the Corporation permits in writing the crop to be destroyed following adjustment, the insurance for such year shall deem to be cancelled upon such portion of the accepted acreage on which the claim is made and such acreage may be put to other use. In such case, a second stage adjustment will be allowed on the portion of the accepted acreage on which the claim is made. At the end of the crop year, this appraised yield will be taken into account on the final adjustment to determine if the actual yield of the crop insured is less than the established percentage of the long term average yield.

RESTAGING CLAIMS

(iii) A crop which shows evidence of not warranting maintaining through to second stage adjustment and should have been reported as a first stage adjustment will only be allowed as a first stage adjustment.

DESTROYING WITHOUT INSPECTION

(f) No adjustment shall be made under this Contract upon any portion of insurable crop which the Insured has destroyed without the consent of the Corporation.

SAMPLE REQUIREMENT FOR CONTRACT CROPS

(g) Requests for post harvest adjustment on mustard, sunflowers, field peas, buckwheat, fababeans, lentils, canary seed, triticale and field beans must be submitted to the Corporation before these crops are moved to market in order that the uncleaned samples for grading can be obtained.

REQUESTING CLAIMS

8. The Insured, upon his insured crop suffering loss or damage from one or more of the causes covered by this Contract shall, as a condition precedent to receiving indemnity hereunder, notify the Corporation in writing of such loss or damage.

Where an Insured requires an adjustment prior to the insured crop being harvested, the notification shall be given as stated above within fifteen (15) days of the crop having suffered a loss or damage, or loss or damage becoming apparent.

DEADLINE FOR REQUESTING UNSEEDED ACREAGE CLAIM

In the case of a claim on unseeded acreage insurance, the Insured shall notify the Corporation as outlined above, by June 27. If no such notification is received by the Corporation as required, no claim shall be payable.

DEADLINE FOR REQUESTING CLAIMS

If the Insured deems a loss of crop has occurred, the Insured shall notify the Corporation of such claim for loss within thirty (30) days of completion of harvesting or by the 30th day of November of that year, whichever is the earlier.

The Corporation shall have the right to reject a claim on any crop filed more than thirty (30) days after harvesting has been completed.

LATE CLAIM REQUESTS

Any claim filed with the Corporation after the 30th day o November shall be classified as a late claim and only seventy-five per cent (75%) of the adjusted loss will be payable by the Corporation for such loss and that seventy-five per cent (75%) will be payable only if the Corporation at that late date is able to establish production sufficient for it to determine the actual loss.

CORPORATION AND CLAIMS

Upon receipt of notification of loss, the Corporation shall appoint an adjustor to appraise the loss.

INSURED AND CLAIMS

On demand by the Corporation, the Insured shall furnish the Corporation and its adjustor with such information relating to the loss as the Corporation may require.

CALCULATION OF INDEMNITY

Upon completion of adjustment, the Corporation shall send a calculation of indemnity (proof of loss) in the prescribed form to the Insured.

TIME LIMIT IN FINALIZING CLAIMS

The Corporation, upon final adjustment, shall pay the amount of the loss or damage as adjusted to the Insured without undue delay, but before the expiry of eight (8) months from acceptance of the final adjustment.

PAYMENT OF CLAIM AND PREMIUM DEDUCTIONS

Where Promissory Notes have been given by the Insured or moneys are owing under any insurance contracts, or other programs administered by the Corporation, and such notes or moneys are unpaid, the Corporation may deduct the amounts of same from any moneys payable to the Insured.

APPEAL TRIBUNAL

9. If the Insured and the Corporation cannot agree as to the amount of the loss or damage suffered by the Insured, then the Insured may apply to the Appeal Tribunal, as set up by The Cro Insurance Act, to fix a greater amount, and such application shall be made by the Insured to the Appeal Tribunal within seven (7) days of receipt by him of the finding of the Corporation, and shall serve a copy of the appeal on the Corporation by registered mail.

MANAGEMENT PRACTICES

coverage due to

premium due to

procedure

10. The Corporation has the right to declare that all or a portion of the loss or damage caused to an insured crop is due to negligence, neglect, misconduct or poor farming practices of the Insured. When such declaration is made, the Corporation is not obligated to pay moneys under the Contract to the Insured for that portion so lost, nor is the Insured entitled to the return of any moneys paid as premium, nor is he relieved from liability for paying outstanding premiums.

Appeal Tribunal

The Corporation shall notify the Insured that it declines to pay all or part of the claim stating the reason therefor; and the insured person may, within seven (7) days of receipt of notice, appeal by written notice of appeal to the Appeal Tribunal, and shall serve a copy of the appeal on the Corporation by registered mail.

CROP MIXTURES

production counted

In the case of production of another insurable kind of crop or any other agricultural crop (at its current market value) being harvested with the insured crop, the Corporation will count the value of total production on such acreage if the insured crop upon which the claim is made has been seeded into an existing crop, or into a crop that has not been properly destroyed, or if other grains are seeded with the insured crop.

LENGTH OF TIME FOR ACTION AGAINST AGENCY

11. Every action or proceeding against the Corporation in respect of loss or damage to the crops insured under the withi Contract, shall be commenced within one (1) year after the

occurrence of the loss or damage and not afterwards.

ASSIGNMENTS

12. The Insured may assign his right to an indemnity for a crop for any year under this Contract in the form approved by the Corporation. The Assignment shall not be binding on the Corporation until accepted in writing by the Corporation. An Assignee shall have the same right as the Insured to file a claim for loss or damage to the insured crop where the Insured does not file a claim.

THIRD PARTY LIABILITY

13. Where he Corporation has paid a claim of the Insured, all rights of the Insured to claim against a third person, other than for other insurance for loss or damage to the insured crop, are hereby assigned to the Corporation to the extent of the amount of loss paid by the Corporation to the Insured for such loss or damage.

term of contract

cancellation date

14. (a) This Contract shall be in effect for a period of one crop year and unless notice of termination is given by either the Corporation or the Insured by registered mail prior to the 31st day of January, shall automatically renew for a further period of one crop year and from crop year to crop year thereafter unless such notice of termination is given by the 31st day of January in any crop year.

termination

(b) This Contract may be terminated either by the Corporation or by the Insured upon either giving the other thirty (30) days' notice in writing by registered mail of such cancellation prior to the 31st day of January in any one year during the term hereof, but in no case may this Contract be cancelled by either the Corporation or the Insured during a crop year except as provided in paragraphs 4, 10 and 14 c, d, f, and in the case of any such cancellation there shall be no coverage for fall rye seeded in that crop year and there shall be no coverage for forage crops for hay production harvested in the following crop year.

termination due to non-payment of premium

(c) If the Insured has not paid the insurance premium in any crop year, and on the 10th day of May of the subsequent crop year same has not been paid, then this Contract shall be deemed to have ceased to have been in effect from the beginning of such subsequent crop year and thereafter, unless the Corporation has consented in writing to the continuation of this Contract.

termination June 30th if crop not harvested

(d) When the Insured has not paid the insurance premium in any crop year, and on the 30th day of June of the subsequent crop year same remains unpaid even though the Insured has insured crops unharvested from the previous crop year which have been appraised by the Corporation, this Contract shall be deemed to have ceased to have been in effect from the beginning of such subsequent crop year and thereafter, unless the Corpration has consented in writing to the continuation of this Contract.

UNSATISFACTORY RISK AND COVERAGE

(e) An Insured who is cancelled by the Corporation for a second time in accordance with subsections (c) and (d) of this section, or both, may be deemed an unsatisfactory credit risk for the Corporation. The Corporation may, at its option, require the Insured to submit an annual application accompanied by the estimated premium in advance.

PREMIUMS IN ARREARS ALL CONTRACTS

(f) An Insured who is in arrears upon premiums which are due on any other Crop Insurance Contract may be cancelled by the Corporation at any time and any claims arising in that year are not payable but premiums for the year are deemed earned.

AMENDMENTS TO CONTRACT

15. The Corporation reserves the right to vary, change or make substitutions to the terms of the within Contract, provided that

such variations, changes or substitutions shall be mailed to the Insured prior to the 15th day of January in any year, to be effective for the ensuing crop year. Upon such mailing, the variations, changes or substitutions shall form part of this Contract from the beginning of such ensuing crop year.

ACRES OF INSURABLE CROPS AND PRO-RATING

16. The Corporation may, at its option, upon the adjustment of a claim for loss to an insured crop, include all production of such crop from acreage in which the Insured has an interest, whether such acreage is insured or not, and may pro-rate such total production to the insured acreage for the purpose of establishing, to its satisfaction, the yield of such crops from the insured acreage.

INSURABLE VARIETIES OF CROPS

Licensed

recommended

17. No variety of a crop shall be covered for insurance hereunder if it has not been recommended for seeding in Manitoba in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" or with respect to crop loss suffered to a variety by reason of disease, the reason for which it has been non-recommended at any time in such booklet, unless such seed variety has been approved by a Board Order of The Manitoba Crop Insurance Corporation.

IRRIGATED LAND

written request by April 30

production kept separate

18. Except for sugar beets and potatoes, any acreage of insured crop which is irrigated by approved irrigation equipment and methods may be excluded from coverage upon written request by the Insured prior to the 30th day of April; otherwise, coverage will apply and premium be earned on such irrigated acres of insured crops but production from such irrigated acreage must be kept separate from other production, failing which the Corporation may pro-rate production.

COVERAGE ON DAMAGED ACRES

19. Once damage has occurred to an insured crop, the acreage of such crop as indicated by the seeded acreage report, shall be the maximum acreage upon which the loss for that kind of crop shall be determined and paid for that year.

REPORTING OLD PRODUCTION

production to count if not reported

20. The Insured shall notify the Corporation in writing, previous to harvest, of any production held in storage from previous years. Production from previous years shall be counted as the current year's production if the Corporation cannot, to its satisfaction, separate the production from the crop year for which a claim is made.

COVERAGE FOR GRAIN AND SILAGE CORN

21. Coverage will apply only on such grain corn and silage corn crops which have been planted at a recommended seeding rate and fertilized according to the recommendations contained in the booklet "Field Crop Recommendations for Manitoba" for the year in which the crop was sown and for the area in which the crop is being grown.

QUALITY DETERMINATIONS

22. Determination of Quality:

When the quality of production of an insured crop is reduced below the designated grade for that crop by reason of one or more of the designated perils covered under this contract, the market value of the harvested production relative to the market value of the designated grade as determined by the Corporation, shall determine the production to count for claim purposes.

When the quality of production is reduced below the designated grade by reason of a non-insured cause of loss such as inseparable seeds or foreign material, the basic grade shall apply as the basis for quality to determine the production to count for claim purposes. All dockage will be deducted from the production in determining a claim. In cases where mechanical damage occurs such as splits or cracks, one half the production of splits or cracks will be counted as production unless otherwise stated in the regulation for that specific crop.

When the moisture content of production is tough or greater, an allowance for shrinkage to dry, as defined by the standards set by the Canadian Grain Commission, will be made to determine the production to count for claim purposes.

HAIL SPOT LOSS

23. The coverage referred to as hail spot loss option shall be coverage for spot loss damage caused by hail and/or fire to insured crops in accordance with the following terms and conditions:

Definition

(a) Hail spot loss damage is defined as that portion of an insured crop damaged by hail and/or fire.

Coverage

(b) Coverage per acre under the hail spot loss option shall be limited to the amount of all-risk coverage for each crop insured. The dollar coverage during the crop year shall be reduced by any amount payable for hail and/or fire spot loss damage.

Indemnity

(c) Total indemnity payments for damage under the hail spot loss option and under the other provisions hereof cannot exceed the all-risk coverage for each insured crop.

Hail Spot Loss Premiums

(d) Discounts shall not apply to the premium for the hail spot loss option and indemnities paid under such option will not affect experience discounts which apply to the basic all-risk contract; nor will they affect the all-risk coverage adjustment factor.

Term of Insurance

(e) Coverage under the hail spot loss option shall be in force and effect for each crop from twelve (12) noon on the following days:

May 15 - Fall rye, rapeseed, mustard, flax, sugar beets, sunflowers, forage crops for hay production and fababeans.

June 1 - Red spring wheat, utility wheat, durum wheat, oats, barley, mixed grain, field peas, potatoes, grain corn, silage corn, buckwheat, lentils, canary seed, triticale and field beans.

Termination of Coverage

(f) Coverage under the hail spot loss option terminates the earliest of:

(i) the insured crop being threshed or removed from the field.

(ii) 12 noon on the 21st day of October for both fire and hail. The deadline for fire loss may be extended in a crop year by a Board Order of The Manitoba Crop Insurance Corporation.

(iii) receipt of a cancellation request from the Insured when a crop has been destroyed by a natural hazard covered by all-risk coverage other than hail and/or fire and when the crop has been destroyed by tillage, pasturing, or other means. In this case, unearned hail spot loss premium on such acreage shall be credited by the Corporation to the Insured in accordance with the prescribed hail spot loss option short date cancellation table.

Landlord

(g) In the case of a landlord/tenant agreement, if the tenant has selected the hail spot loss option, the landlord and tenant have coverage based on the crop sharing agreement.

Notice of Loss

(h) In the event of hail spot loss damage, the Insured shall notify the local agency office within three days of the occurrence of loss.

Adjustment fee if loss less than 5 %

(i) If a claim is filed and the loss is adjusted and found to be less than five per cent (5%), an adjustment fee of $50.00 may be payable by the Insured.

less than 5 %

(j) No payment shall be made on the hail spot loss option on that portion of the damaged acreage determined to be less than five per cent (5%) of damage.

over-ripe crop

(k) No payment shall be made on the hail spot loss option for any loss or damage caused by reason of a crop being over-ripe.

representative strips

(l) If under the hail spot loss option, damage by hail and/or fire occurs when a crop is standing or is cut and ready for threshing, subject to proper notice of loss being given, the Insured may proceed to harvest provided that representative strips of each damaged crop the full length of the field and no less than four meters (twelve feet) in width are left for inspection and adjustment.

additional award

(m) Under the hail spot loss option, if damage to an insured crop by reason of hail exceeds seventy per cent (70%) on any acre or acres of crops insured, an additional award shall be made in the amount of the difference between the actual adjusted loss and seventy per cent (70%) with a maximum award being allowed of ten per cent (10%) of the loss as adjusted, provided always that in no case shall the total award exceed the amount of insurance coverage applicable thereto.

Limitations; frost and fire

(n) No amount shall be paid on the hail spot loss option for damage caused to an insured crop by reason of frost or by reason of fire if such fire is kindled by the Insured, unless lawfully kindled and in compliance with all precautions required by law.

Insurable stands of crop

(o) No payment shall be made on such acres upon which, in the opinion of the Corporation, there was not sufficient plant population to warrant leaving for crop production prior to the occurrence of damage by hail and/or fire, and the premium on such acreage so designated shall be refunded by the Corporation.

RIGHT OF ENTRY

24. Upon acceptance of the application for insurance, the Insured agrees that all representatives of the Corporation shall have unlimited right of entry onto the Insured's owned or rental lands for crop insurance purposes during the term of this Contract of Crop Insurance.

PERSONAL GUARANTEE

25. If the Insured is a Corporation, the premiums due under this Contract shall be personally guaranteed by the individual or individuals who own the controlling shares of the insured Corporation.

IN WITNESS WHEREOF THE MANITOBA CROP INSURANCE CORPORATION has executed and attested these presents, but this Contract shall not be valid until signed by a duly authorized representative of The Manitoba Crop Insurance Corporation.

THE MANITOBA CROP INSURANCE CORPORATION

Per:

Authorized Representative

C.I. 100 Rev. 1986
MG-2105

Schedule "X"

Coverage Adjustment

1. "Coverage Adjustment" means the adjustment in coverage applicable to an Insured as determined by relating the Insured's actual loss ratio experience, number of years insured and number of loss years to the appropriate tables set out in this Schedule.

2. Tables I and II shall be used to determine the coverage adjustment increase when an Insured's loss ratio is 1.60 or less of the end of the 1984 crop year.

3. Tables I and III shall be used to determine the coverage adjustment decrease when an Insured's loss ratio is 1.61 or greater as of the end of the 1984 crop year.

TABLE I

COVERAGE ADJUSTMENT CONSTANTS FOR CROPS

	TONNES PER ACRE INCREASED COVERAGE FOR LOSS RATIO 0.00-1.60		TONNES PER ACRE DECREASED COVERAGE FOR LOSS RATIO 1.61 OR GREATER

PRODUCTION TO COUNT

Stage I - The part of an appraisal over one-half of an Insured's coverage will be counted and deducted from Stage I coverage. In other words, the first half of an Insured's full coverage is not counted. The small appraisal allowances as detailed on the following page do not apply to Stage I appraisals.

Stage II UH - The appraised yield per acre, adjusted for small appraisal allowance if applicable as detailed for each crop on the following page, will be deducted from the Stage II coverage or full coverage.

Stage II H - The harvested yield per acre, corrected for quality guarantee, and adjusted for small appraisal or low production allowance if applicable as detailed for each crop on the following page, will be deducted from Stage IIH coverage. Production to count in the various stages of adjustment for sugar beets and potatoes are explained in the Potato Adjusting Supplement and the Sugar Beet Adjusting Supplement.

IMPORTANT - In all cases the adjustor will record the full amount of production appraised in a pre-harvest adjustment and the production to count in the various stages will be calculated in Head Office. The following page is included only to show how allowances for small appraisals and low harvested yields will affect the final production to count and will have no bearing on your appraisal of potential production in the field.

NOTE:

1. Production to count in the table above does not apply to Stage I adjustments.

2. Adjustment procedures in the field will be unchanged. Appraisals will be reported in full as always. Production to count will be determined in Head Office in accordance with this table.

3. It will be more necessary than ever to break fields into parcels and appraise each parcel separately in cases where there is considerable variation in the potential production on various parts of the total acreage of a crop.

* Includes Red Spring Wheat, Amber Durum Wheat, Utility Wheat and Winter Wheat.

Schedule "AA"

TRITICALE INSURANCE PROGRAM FOR 1986

Definitions.

1. In this Regulation

   (a) "Insurable crop" includes triticale and for which premium rates and coverages are provided in the Regulation.

   (b) "Triticale" means triticale varieties grown in Manitoba and harvested for the production of seed and currently recommended in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba".

Regulations

2. Coverage for losses to triticale under the all-risk contract, in addition to all other applicable conditions under the Contract of Crop Insurance, shall be subject to the following terms and conditions:

   (a) Eligibility to Insure:

      (i) All areas of the province eligible for wheat insurance under the all-risk contract shall be eligible for triticale insurance.

   (b) Coverage for triticale must be selected by the 30th day of April of the year in which coverage is to apply.

   (c) Insurance Period and Final Date of Seeding:

   The insurance coverage will apply from planting through harvest provided that the triticale is planted on or before the 10th day of June.

   (d) Unit of Production for insurance purposes shall be tonne.

   (e) Established Price - for insurance purposes, three dollar values are available in 1986 as follows:

      Low = $100.00 per tonne
      Medium = $120.00 per tonne
      High = $140.00 per tonne

to be used for the purpose of calculating dollar coverages and indemnities.

(f) Adjustments for losses will be made as follows:

(i) The reseeding Benefit as set our in section 7 of the Contract of Crop Insurance shall apply to triticale crops insured under this regulation and shall be 25% of the full coverage per acre for each acre reseeded that qualifies.

(ii) Coverage Stages - coverage will apply in two stages as the crop progresses from planting to harvest. In each Stage the guarantee will be a percentage of the full harvested stage coverage as follows:

Stage I - 50% of harvested coverage
Stage II - 100% of harvested coverage

Stage I applies when the crop is destroyed on or before the 25th day of June in accordance with section 7 of the Contract of Crop Insurance.

Stage II Pre-harvest commences on the 26th day of June and will apply until such time as the crop has been harvested or destroyed. (Triticale crops damaged or destroyed during this period or crops not harvested due to adverse weather conditions.)

Post-harvest applies to triticale crops harvested and below coverage.

(iii) Production to count, for adjusting purposes shall be as follows:

Appraised or Harvested Production kg/Acre		Production to Count kg/Acre
Over	and including	
0	100	0
100	125	50
125		All

(iv) In cases where weeds are reducing the potential yield of triticale, an amount equal to the yield reduction due to weed competition will be appraised and charged as an uninsured cause of loss.

(v) Where triticale crops are not grown in accordance with the recommendations in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" with respect to crop rotation for disease control, and loss is due to the disease for which the rotation is recommended, an amount equal to the yield reduction due to the disease will be appraised and charged as an uninsured cause of loss.

(vi) Quality Guarantee - for the purpose of determining harvested production, the quality guarantee shall be #2 Canada. When the moisture content of triticale production is in excess of 14%, an amount equal to the moisture in excess of 14% will be deducted as dockage from the production to adjust the production to a dry weight basis.

(vii) Requests for post harvest adjustments on triticale must be submitted to the Agency in accordance with section 8 of the Contract of Crop Insurance, and before the production is moved to market in order that uncleaned samples for grading can be obtained.

3. Hail and/or Fire Coverage.

The hail spot loss coverage under the all-risk program is available for triticale insured under this regulation and shall be in force and effect from 12 noon of the 1st day of June. All other terms and conditions regarding the hail spot loss option coverage are as outlined in section 24 of the Contract of Crop Insurance.

The premium rate for triticale shall be the premium rate shown for the respective risk areas set out in Schedule "Y" of Manitoba Revised Regulation C310-R2.

Hail coverage under Part II of The Crop Insurance Act will also be available for triticale.

4. Experience Discounts shall apply to premiums on triticale in the same way as to premiums on other insurable crops.

5. Coverages and premium rates shall be as set out in Schedules "AA-1" to "AA-8" inclusive.

SCHEDULE "A"

MANITOBA REGULATION /85

Being a Regulation Under The Crop Insurance Act Respecting Insurance Coverage for Winter Wheat

Definitions:

1. In this Regulation:

(a) "Insurable crop" includes winter wheat and for which premium rates and coverages are provided in the Regulation.

(b) "Winter wheat" means winter wheat grown in Manitoba and harvested for the production of seed and for 1986 shall include the variety Norstar, plus any other variety approved by Order of the Board of Directors.

Regulations:

2. Coverage for losses to winter wheat under the all-risk contract, in addition to all other applicable conditions under the Contract of Crop Insurance, shall be subject to the following terms and conditions:

(a) Eligibility to Insure:

(i) The area of eligibility for winter wheat coverage shall be restricted to risk areas 1,2,3 and 8.

(ii) Coverage is not available under this Regulation unless the Insured has agreed to insure two kinds of insurable crops. If only two crops are insured, one crop must be other than soybeans or pedigreed Timothy seed. The acreage requirements are as set out in section 6(4) of the Contract of Crop Insurance.

(iii) Only those M.C.I.C. contract holders who have grown winter wheat for one or more years are eligible for coverage under this Regulation.

(iv) Coverage for winter wheat must be selected by the 31st day of August of the year prior to the year in which the winter wheat is intended to be harvested.

(v) Insurance Period and Final Date of Seeding.

Insurance coverage will apply from planting through harvest provided the winter wheat is planted on or before the 15th day of September of the year prior to the year in which winter wheat is intended to be harvested.

(b) Coverage shall apply only to fields which are planted directly into standing stubble as currently recommended in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba".

(c) For crop insurance purposes, units of production shall be in tonnes per acre.

(d) For crop insurance purposes, in calculating dollar coverage and indemnities, three dollar values per tonne are available in 1986 as follows:

Low = $100.00 per tonne
Medium = $120.00 per tonne
High = $140.00 per tonne

3. Adjustments for losses will be made as follows:

(a) The reseeding benefit shall apply to winter wheat crops insured under this Regulation and shall be 25% of the full coverage per acre for each acre reseeded that qualifies in accordance with section 7 of the Contract of Crop Insurance. In the case of winter wheat reseeded to winter wheat or fall rye on or before the final date of seeding for winter wheat (15th day of September) or fall rye (25th day of September) of the same year and subject to the Contract of Crop Insurance, a reseeding benefit of twenty-five per cent (25%) will be paid. In the case where winter wheat is reseeded to another insured crop on or before the 25th day of June of the crop year in which the winter wheat was to be harvested, a reseeding benefit of twenty-five per cent (25%) will be paid subject to the Contract of Crop Insurance.

(b) Coverage Stages - coverage will apply in two stages as the crop progresses from planting to harvest. In each stage the guarantee will be a percentage of the total coverage as follows:

Stage I - 50% of total coverage
Stage II - 100% of total coverage

Stage I commences the 1st day of January of the year in which the winter wheat crop is to be harvested and continues until the 25th day of June. Stage I applies when the crop is destroyed during this period in accordance with the Contract of Crop Insurance.

Stage II applies when the crop is harvested or destroyed after the 25th day of June.

(c) For purposes of calculating indemnities, the appraised production in the case of unharvested crops or harvested production in the case of harvested crops shall be counted in accordance with the following table:

Appraised or Harvested Production Kg/Acre		Production to Count Kg/Acre
Over	and Including	
0	100	0
100	125	50
125	-	All

(d) Where winter wheat crops are not grown in accordance with the recommendations in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" with respect to crop rotation for disease control, and loss is due to the disease for which the rotation is recommended. an amount equal to the yield reduction due to the disease will be appraised and charged as an uninsured cause of loss.

(e) Quality Guarantee - for the purpose of determining harvested production, the quality guarantee shall be # 2 C.W. Red Winter. When the moisture content of winter wheat is in excess of 14%, an amount equal to the moisture in excess of 14% will be deducted as dockage from the production to adjust the production to a dry weight basis.

4. Hail and/or Fire Coverage

The hail spot loss coverage under the all-risk program is available for winter wheat insured under this Regulation and shall be in force and effective from 12 noon of the 15th day of May. The short-date cancellation table for winter wheat will be the same as for fall rye under Schedule "Y-1" of Manitoba Revised Regulation C310-R2 for hail spot loss and Schedule "D" of Manitoba Revised Regulation C310-R5 for Part II Hail. All other terms and conditions regarding the hail spot loss option coverage are as outlined in section 24 of the Contract of Crop Insurance.

The hail spot loss premium rate for winter wheat shall be the premium rate shown for the respective risk areas set out in Schedule "Y" of Manitoba Revised Regulation C310-R2.

Hail coverage under Part II of The Crop Insurance Act will also be available for winter wheat, but only for those winter wheat crops which are insured under the all-risk program.

5. Experience discounts shall apply to premiums on winter wheat in the same way as to premiums on other insurable crops.

6. Coverages and premium rates shall be as set out in Schedules "AD-1" to "AD-2" inclusive.

7. Other Regulations as laid down in the Contract of Crop Insurance will also apply to winter wheat insofar as they are applicable.

Schedule "I"

DATES FOR SEEDING

Argentine Rapeseed:

1. Manitoba be divided into two areas (Area "A" and Area "B") for purposes of establishing final dates of seeding for Argentine.

Area "A" to include Risk Areas 1, 2, 4, 5, 10, 11, and 12 plus that part of Risk Area 6 south of Township 14 and that part of Risk Area 3 south of Township 16.

Area "B" to include Risk Areas 7, 8, 9, 14, 15, and 16 plus that part of Risk Area 6 north of Township 13 and that part of Risk Area 3 north of Township 15.

2. That the final dates of seeding for Argentine rapeseed be as follows:

Area "A"	June 15
Area "B"	June 10

Polish Rapeseed:

1. Manitoba be divided into two areas (Area "A" and Area "B") for purposes of establishing final dates of seeding for Polish rapeseed.

Area "A" to include Risk Areas 1, 2, 4, 5, 10, 11, and 12 plus that part of Risk Area 6 south of Township 14 and that part of Risk Area 3 south of Township 16.

Area "B" to include Risk Areas 7, 8, 9, 14, 15, and 16 plus that part of Risk Area 6 north of Township 13 and that part of Risk Area 3 north of Township 15.

2. That the final dates of seeding for Polish rapeseed be as follows:

Area "A:	June 25
Area "B"	June 20

Schedule "K"

SEEDING DATES FOR BUCKWHEAT

That Manitoba be divided into two areas (Area "A" and Area "B") for purposes of establishing final dates of seeding for Buckwheat.

Area "A" to include Risk Areas 1, 2, 4, 5, 10, 11, and 12 plus that part of Risk Area 6 south of Township 14 and that part of Risk area 3 south of Township 16.

Area "B" to include Risk Areas 7, 8, 9, 14, 15, and 16 plus that part of Risk Area 6 north of Township 13 and that part of Risk Area 3 north of Township 15.

That the final date for seeding Buckwheat in Area "A" remain at June 25 and that the final date for seeding Buckwheat in Area "B" be June 20.

Schedule "M"

Grain Corn Insurance Program for 1986

Definitions

1. In this Regulation,

   (a) "Grain Corn" means the corn hybrids which are grown for grain corn production that are recommended or have been recommended within the last 10 years in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" for the area in which the corn is being grown.

Regulations

2. Coverage for losses to grain corn under the all-risk contract, in addition to all other applicable conditions under the all-risk contract shall be subject to the following additional terms and conditions:

   (a) The areas eligible for grain corn insurance are as set forth in Schedules "M-1" and "M-2".

   (b) Coverage for grain corn must be selected by the 30th day of April of the year in which the coverage is to apply.

   (c) Eligibility to insure:

   Those Insureds who produce both grain corn and silage corn must select both crops on their Contract of Crop Insurance and must insure them at the same price option (high, medium or low dollar value).

   (d) Coverage will apply only to:

      1) grain corn crops which have been planted at a seeding rate and fertilized according to the recommendations contained in the booklet published annually by the Minister of Agriculture, with the title "Field Crop Recommendations for Manitoba" for the year in which the crop was sown and for the area in which the crop is being grown.

      2) Those corn hybrids, recommended within the last 10 years in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba"

         (i) are eligible for coverage in Grain Corn

Area "A", and

(ii) those hybrids which are or were rated at or below 2250 corn heat units are eligible for coverage in Corn Area "B-1", and

(iii) those hybrids which are or were rated at or below 2150 corn heat units are eligible for coverage in Corn Area "B-2".

Grain corn hybrids which are rated for maturity at or below 2200 corn heat units and are currently recommended in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" will be considered for coverage in Corn Area "B-2", at the option of The Manitoba Crop Insurance Corporation.

3) Those grain corn crops planted on or before the 25th day of May in Corn Areas "B-1" and "B-2".

4) Those grain corn crops planted on or before the 1st day of June in Corn Area "A".

(e) Insureds who have selected both grain corn and silage corn coverage must report the location of and acreage of each crop at the time of completing the seeded acreage report.

3. Adjustments for losses will be made as follows:

(a) Stage I - Fifty per cent (50%) of coverage will apply if grain corn is worked down and reseeded to a different crop in accordance with section 7 of the Contract of Crop Insurance. If grain corn is worked down and reseeded to silage corn, a Stage I adjustment will apply as silage corn is considered to be a different crop. The reseeding benefit will also apply in the above case in accordance with section 7 of the Contract of Crop Insurance.

(b) Stage II - Full coverage will apply after the 25th day of June. For adjusting purposes in this stage, grain corn and silage corn are considered as separate crops in accordance with the acres declared on the seeded acreage report.

4. For purposes of individual coverage adjustment, the Insured must submit annually a yield report on all insured acres prior to the 30th day of April of the year following. For verification purposes, the above stated yields will be subject to a spot check by the Corporation.

5. Other regulations as laid down in the Contract of Crop Insurance will also apply to grain corn insofar as they are applicable.

6. Effective rates and coverages for grain corn in Corn Areas "A", "B-1" and "B-2" are as set out in Schedules "M-1" and "M-2".

Silage Corn Insurance Program for 1986

Definitions

1. In this Regulation,

   (a) "Silage Corn" means the corn hybrids which are grown for silage that are recommended or have been recommended within the last 10 years in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba".

   (b) "Corn Silage" means silage produced from whole corn plants at sixty-five per cent (65%) moisture and thirty-five per cent (35%) dry matter content.

   (c) "Test Area" means the land lying within the boundaries of the Rural Municipalities of Swan River and Minitonas.

Regulations

2. Coverage for losses to silage corn under the all-risk contract, in addition to all other applicable conditions under the all-risk contract shall be subject to the following additional terms and conditions:

   (a) In Corn Areas "A", "B-1" and "B-2", all Insureds who produce both grain corn and silage corn must select both grain corn and silage corn for insurance coverage, except in the case of those insured in the Test Area where silage corn coverage only is offered.

   (b) Coverage for silage corn must be selected by the 30th day of April of the year in which the coverage is to apply.

   (c) The areas eligible for silage corn insurance are as set forth in Schedules "N-1" and "N-2".

   (d) Eligibility to insure:
   In the Test Area, Insureds who select silage corn coverage must insure their entire acreage of field corn planted and will be adjusted entirely on the silage corn basis.

   Corn Areas "A", "B-1" and "B-2", excluding the Test

Area - Insureds who produce both silage and grain corn must select both crops at the same price option (high, medium or low dollar value).

(e) Coverage will apply only to a crop which has been:

(1) planted at a seeding rate which could result in a plant population of between 18,000 and 28,000 plants per acre, and

(2) fertilized according to the recommendations contained in the booklet with the title "Field Crop Recommendations for Manitoba" published annually by the Minister of Agriculture for the year in which the crop is sown and for the area in which the crop is grown.

(f) Coverage will apply only to those corn hybrids which are grown in the areas having sufficient corn heat units for their production, as recommended in the booklet published by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba".

With respect to silage corn grown in the Test Area, coverage will apply only to those corn hybrids currently recommended and rated at or below 2200 corn heat units.

(g) Insureds who have selected and produce both silage and grain corn must report the location of and acreage of each crop at the time of completing the seeded acreage report.

(h) The final seeding date for acceptance of liability for silage corn is the 10th day of June, except in the case of silage corn liability in the Test Area which is the 25th day of May.

(i) Adjustments for losses will be made as follows:

Stage I - Fifty per cent (50% of coverage will apply if silage corn is worked down and reseeded to a different crop in accordance with section 7 of the Contract of Crop Insurance. An adjustment will apply if the silage corn is worked down and reseeded to grain corn in accordance with the Contract of Crop Insurance as grain corn is considered to be a different crop. The reseeding benefit will also apply in the above case in accordance with section 7 of the Contract of Crop Insurance.

Stage II - Full coverage will apply after the 25th day of June and will only be made on an unharvested basis. Since a post harvest adjustment cannot be made, an Insured who expects that his silage production is below coverage must notify The Manitoba Crop Insurance Corporation at least five (5) days prior to harvest requesting an adjustment on his silage corn.

(j) All provisions applicable to other insurable crops, with the exception of the coverage adjustment will apply to silage corn.

3. Hail and/or Fire Coverage
The hail spot loss coverage under the all-risk program is available for silage corn in Corn Areas "A" and "B" and the silage corn Test Area.

Hail coverage under Part II of The Crop Insurance Act is also available in Corn Areas "A" and "B", but in the silage corn Test Area, it is only available for those silage corn crops which are insured under the all-risk program.

4. Effective rates and coverages for silage corn are set out in Schedules "N-1" and "N-2".

Schedule "T"

FIELD BEAN INSURANCE PROGRAM FOR 1986

Definitions

1. In this Regulation

(a) "Insurable crop" includes field beans and for which premium rates and coverages are provided in the Regulation.

(b) "Field Beans" means beans of the species *Phaseolus vulgaris* including the following types: white (navy and pea), black (black turtle) and pinto, grown in Manitoba and harvested for the production of seed and recommended in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba".

Regulations

2. Coverage for losses to field beans under the all-risk contract, in addition to all other applicable conditions under the Contract of Crop Insurance, shall be subject to the following terms and conditions:

(a) Eligibility to Insure:

(i) Only those M.C.I.C. contract holders who have grown field beans successfully for one or more years are eligible for coverage under this regulation.

(ii) The areas of the province established as test areas eligible for field bean insurance are as set out in Schedule "T-1" of this regulation.

(iii) Only field beans of the type white (navy or pea) will be eligible for coverage in Test Area "B". All field beans eligible for coverage under this regulation are eligible for coverage in Test Area "A".

(b) Coverage for field beans must be selected by the 30th day of April of the year in which coverage is to apply.

(c) Insurance Period and Final Date of Seeding:

Insurance coverage will apply from planting through harvest provided that the field beans are planted on or before the 5th day of June in Test Area "A" and on or before the 1st day of June in Test Area "B".

(d) Unit of Production - for insurance purposes shall be tonne.

(e) Established Price - for insurance purposes, three dollar values are available in 1986 as follows:

Low = $220.00 per tonne
Medium = $260.00 per tonne
High = $300.00 per tonne

to be used for the purpose of calculating dollar coverages and indemnities.

(f) Adjustments for losses will be made as follows:

(i) The Reseeding Benefit as set out in section 7 of the Contract of Crop Insurance shall apply to field bean crops insured under this regulation and shall be 25% of the full coverage per acre for each acre reseeded that qualifies.

(ii) Coverage Stages - coverage will apply in two stages as the crop progresses from planting to harvest. In each stage the guarantee will be a percentage of the full harvested stage coverage as follows:

Stage I = 50% of harvested coverage
Stage II = 100% of harvested coverage

Stage I applies when the crop is destroyed on or before the 25th day of June in accordance with section 7 of the Contract of Crop Insurance.

Stage II Pre-harvest commences on the 26th day of June and will apply until such time as the crop has been harvested or destroyed. (Field bean crops damaged or destroyed during this period or crops not harvested due to adverse weather conditions.)

Post harvest applies to field bean crops harvested and below coverage.

(iii) Production to count, for adjusting purposes shall be as follows:

Appraised or Harvested Production kg/acre		Production to Count kg/acre
Over	Including	
0	50	0
50	75	35
75		All

(iv) In cases where weeds are reducing the potential yield of field beans, an amount equal to the yield reduction due to weed competition will be appraised and charged as an uninsured cause of loss.

(v) Where field bean crops are not grown in accordance with the recommendations in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" with respect to crop rotation for disease control, and loss is due to the disease for which the rotation is recommended, an amount equal to the yield reduction due to the disease will be appraised and charged as an uninsured cause of loss.

(vi) (a) Quality Guarantee - for the purpose of determining harvested production, the quality guarantee shall be #1 Canada for white (navy or pea) beans and #2 Canada for black (black turtle) and pinto. When the moisture content of field bean production is in excess of 18%, an amount equal to the moisture in excess of 18% will be deducted as dockage from the production to adjust the production to a dry weight basis.

(b) When the grade of field bean production is lower than the basic grade field beans by reason of split field beans, the basic grade Canada field bean will apply as the basis for settlement of quality; when dockage for field bean production contains split field beans, one half of the amount of split field beans recorded as dockage will be counted as production.

(vii) Requests for post harvest adjustments on field beans must be submitted to the Agency in accordance with section 8 of the Contract of Crop

Insurance, and before the production is moved to market in order that uncleaned samples for grading can be obtained.

3. Hail and/or Fire Coverage

   The hail spot loss coverage under the all-risk program is available for field beans insured under this regulation and shall be in force and effect from 12 noon of the 1st day of June. All other terms and conditions regarding the hail spot loss option coverage on field beans are as outlined in section 24 of the Contract of Crop Insurance.

   The premium rate for field beans shall be 1.5 x the premium rate shown for the respective risk areas set out in Schedule "Y" of Manitoba Revised Regulation C310-R2.

   Hail coverage under Part II of The Crop Insurance Act will also be available on field beans.

4. Experience Discounts shall apply to premiums on field beans in the same way as to premiums on other insurable crops.

5. Coverages and premium rates shall be as set out in Schedule "T-1".

Schedule "A"

MANITOBA REGULATION /85
BEING A REGULATION UNDER THE CROP INSURANCE ACT RESPECTING INSURANCE COVERAGE FOR SOYBEANS

Definitions:

1. In this Regulation -

   (a) "Insurable crop" includes soybeans and for which premium rates and coverages are provided in the Regulation.

   (b) "Soybeans" means soybeans grown in Manitoba and harvested for the production of seed and currently recommended in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba".

Regulations:

2. Coverage for losses to soybeans under the all-risk contract, in addition to all other applicable conditions under the Contract of Crop Insurance, shall be subject to the following terms and conditions:

   (a) Eligibility to Insure:

      (i) Only those M.C.I.C. contract holders who plant 20 or more acres of soybeans and have grown soybeans for one year or more are eligible for coverage under this Regulation.

      (ii) The areas of the province established as test areas eligible for soybean insurance are as set out in Schedules "AB-1" and "AB-2" of this Regulation.

      (iii) Only soybeans which are or were rated at or below 2,200 corn heat units will be eligible for coverage in Test Area "B". All soybeans eligible for coverage under this Regulation are eligible for coverage in Test Area "A".

      (iv) Coverage is not available under this Regulation unless the Insured has agreed to insure two kinds of insurable crops. If only two crops are insured, one crop must be other than soybeans, or pedigree Timothy seed.

(b) Coverage for soybeans must be selected by the 30th day of April of the year in which coverage is to apply.

(c) Insurance Period and Final Date of Seeding:

Insurance coverage will apply from planting through harvest provided that the soybeans are planted on or before the 1st day of June in both Test Areas "A" and "B".

(d) Unit of Production - for insurance purposes shall be tonne.

(e) Established Price - for insurance purposes, three dollar values are available in 1986 as follows:

Low = $180.00 per tonne

Medium = $220.00 per tonne

High = $260.00 per tonne

to be used for the purpose of calculating dollar coverages and indemnities.

(f) Adjustments for losses will be made as follows:

(i) The Reseeding Benefit as outlined in section 7 of the Contract of Crop Insurance shall apply to soybean crops insured under this Regulation and shall be 25% of the full coverage per acre for each acre reseeded.

(ii) Coverage Stages - coverage will apply in two stages as the crop progresses from planting to harvest. In each stage the guarantee will be a percentage of the full harvested stage coverage as follows:

Stage I = 50% of harvested coverage

Stage II = 100% of harvested coverage

Stage I applies when the crop is destroyed on or before the 25th day of June in accordance with section 7 of the Contract of Crop Insurance.

Stage II pre-harvest commences on the 26th day of June and will apply until such time as the crop has been harvested or destroyed (ie Soybean crops damaged or destroyed during this period or crops not harvested due to adverse weather conditions).

Post harvest applies to soybean crops harvested and below coverage.

(iii) Production to count, for adjusting purposes shall be as follows:

Appraised or Harvested Production kg/acre Over & Including		Production to Count kg/acre
0	50	0
50	70	25
70		ALL

(iv) In cases where weeds are reducing the potential yield of soybeans, an amount equal to the yield reduction due to weed competition will be appraised and charged as an uninsured cause of loss.

(v) Where soybean crops are not grown in accordance with the recommendations in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" with respect to crop rotation for disease control, and loss is due to the disease for which the rotation is recommended, an amount equal to the yield reduction due to the disease will be appraised and charged as an uninsured cause of loss.

(vi) Quality Guarantee - for the purpose of determining harvested production, the quality guarantee shall be #2 Canada for soybeans. When the moisture content of soybean production is in excess of 14%, an amount equal to the moisture in excess of 14% will be deducted as dockage from the production to adjust the production to a dry weight basis. When dockage for soybean production contains split or cracked soybeans, one half of the amount of split or cracked soybeans will be counted as production.

(vii) Requests for post harvest adjustment on soybeans must be submitted to the agency in accordance with section 8 of the Contract of Crop Insurance, and before the production is moved to market in order that uncleaned samples for grading can be obtained.

3. Hail and/or Fire Coverage.

The spot loss hail coverage under the all-risk program is available on soybeans insured under this Regulation and shall be in force and effect from 12 noon of the 1st day of June. All other terms and conditions regarding the hail spot loss option coverage are as outlined in section 24 of The Contract of Crop Insurance. The premium rate for soybeans shall be 1.5 x the premium rate shown for the respective risk areas outlined in Schedule "Y". Hail coverage under Part II of The Crop Insurance Act will also be available on soybeans but only for those soybean crops which are insured under the all-risk program.

4. Experience Discounts shall apply to premiums on soybeans in the same way as the premiums on other insurance crops.

5. Coverages and premium rates shall be as set out in Schedules "AB-1" and "AB-2".

Schedule "V"

Potato Insurance Program for 1986

The following regulations will apply to a crop insurance program to provide coverage on potato crops in Manitoba:

1. Premium and Premium Rates

Every grower who insures a potato crop will pay the same dollar premium per acre within each dollar value selected. The premium rate will vary according to the coverage established by the Corporation for each grower on the basis of available production records. The premium per acre for potato insurance in 1986 will be as follows:

Dollar Selection Per tonne	Premium Paid By Insured Per Acre	Federal Contribution @ 50% Per Acre	100% Premium Per Acre
$60.00	$12.92	$12.91	$25.83
$70.00	$15.07	$15.07	$30.14
$80.00	$17.23	$17.22	$34.45

Each insured grower will receive from the Corporation a statement of his potato coverage as calculated for 1986 prior to January 15, 1986.

2. Coverage

Each insured grower is given coverage equal to 80% of the ten year average potato yield assigned to him by the Corporation on the following basis:

(a) Growers for whom no records of production are available for any of the previous ten years, who are insuring potatoes for the first time, will be assigned coverage based on the ten year provincial average yield of 6.859 tonnes per acre.

(b) Growers who have been insured previously will be assigned a yield for coverage purposes based on the provincial average yield and their own yields as determined by the Corporation for the years in which they were insured.

(c) Growers who can supply acceptable production record for any or all of the previous ten years and growers for whom the Corporation can obtain acceptable production records from potato processing companies for any or all of the previous ten years will be assigned a yield for coverage purposes based on their own average yield and the provincial average yield for those years for which records are not available.

3. Application for Potato Insurance

The potato crop must be added to an existing crop insurance contract or be included in the application for a new contract, not later than the 30th day of April of the year in which the insurance coverage is to apply.

4. Eligibility to Insure

Any potato grower or group of growers in Manitoba who intends to plant four (4) or more acres of potatoes is eligible to apply for insurance for the total potato crop. Partnerships or grower groups will be required to insure the total acreage of potatoes under a partnership contract of crop insurance, i.e. acreage cannot be split and a portion insured by each of the partners under his own Contract of Crop Insurance.

5. Insurance Period and Final Seeding Date

The insurance coverage will apply from planting through harvest provided that in the case of:-

(a) Early maturing varieties of potatoes as named in the "1986 Field Crop Recommendations for Manitoba", the crop is planted on or before the 15th day of June.

(b) Main crop varieties (later maturing) as named in the "1986 Field Crop Recommendations for Manitoba", the crop is planted on or before the 5th day of June.

6. Unit of Production - for insurance purposes shall be tonne.

7. Established Price - for insurance purposes there are three dollar values available in 1986 as follows:
Low - $60.00/tonne; Medium - $70.00/tonne; High - $80.00/tonne (for the purpose of calculating dollar coverage and indemnities).

8. Coverage Stages

Coverage will apply in stages as the crop progresses from planting to harvest. In each stage the guarantee will be a percentage of the full harvesting stage coverage as follows:

Stage I - 50% of harvested coverage
Stage II - 75% of harvested coverage
Stage III - 100% of harvested coverage

9. Coverage Stages Defined

Stage I Crop destroyed but early enough to reseed to a substitute crop (up to and including June 25) in accordance with section 7 of the Contract of Crop Insurance.

Stage II Shall commence on the 26th day of June and will apply until such time as the crop is harvested or abandoned (ie. potato crops damaged or destroyed during this period or crops not harvested due to adverse weather conditions).

Stage III Post Harvest Stage - will apply to crops harvested and below coverage. A stand of potatoes which shows evidence of not having been a stand which would warrant maintaining through harvest should have been reported in Stage II and therefore, adjustment will be made as a Stage II.

10. Insurance Coverage Shall Not Apply:

(a) On acreages of less than four acres in total.

(b) On losses due to plant disease on acreages planted not in accordance with current field crop recommendations as published by the Minister of Agriculture in the booklet titled "Field Crop Recommendations for Manitoba" for potatoes regarding rotations for disease control.

(c) On acreages planted to non-certified seed if a loss occurs and the cause of loss is determined to be bacterial ring rot.

(d) On acreage destroyed by the Insured before inspection by a Corporation employee.

11. Determination of Production for Purposes of Evaluating Losses

Coverage as calculated for each insured grower is based on the yield of marketable potatoes. In the case of a claim the Corporation will determine the production of marketable potatoes by collecting and submitting random samples of the insured grower's production to the Vegetable Marketing Commission for grading or to the processing plant with which the insured grower holds a contract in the case of contract production of processing potatoes, or in the case of potatoes grown for seed production, marketable potatoes shall be determined based on Schedule IV of the Seeds Act titled "Grades for Seed Potatoes".

Such sample grades shall determine the amount of non-marketable potatoes to be deducted from the gross production as determined by the Corporation by field and bin measurement and by examination of sales records to be submitted by the grower. In the case of growers who deliver all of their production directly to a processing plant at the time of harvest, production will be determined from records of delivery to the processing plant. If, for any reason, all of the production has not been delivered to the processing plant, such production must be declared. For crop insurance purposes, non-marketable is defined as potatoes which cannot be marketed because of insurable causes. Potatoes that are non-marketable because of non-insurable causes will be considered as production to count for claim purposes. It is the responsibility of the insured grower to request inspection and sampling at the time of harvest if he anticipates his production may fall below his coverage and result in a post harvest claim. In cases where damage to the potato crop occurs earlier in the season, the grower must request inspection immediately through his crop insurance agent. If part of the total acreage of potatoes is lost in Stage I or Stage II an interim adjustment will be made but an indemnity payment will not be made until it is known that the total production of the crop is below coverage (after harvest).

12. Good Experience Discount - Shall apply to premiums on potatoes in the same way as to premiums on other insurable crops.

13. Other regulations as laid down in the crop insurance contract will also apply to potatoes insofar as they are applicable.

Schedule "A"

Sugar Beet Insurance Program for 1986

The following regulations will apply to a crop insurance program to provide coverage on sugar beet crops in Manitoba.

1. Premium and Premium Rate - Every grower who insures a sugar beet crop will pay the same dollar premium per acre within each dollar selection. The premium rate will vary according to the coverage established by the Corporation for each grower, on the basis of his average yield records. The premium in dollars per acre for sugar beet insurance in 1986 will be as follows:

Dollar Value Selection Per tonne	100% Premium Per Acre	50% Federal Contribution Per Acre	Insureds' Premium Per Acre
$25.00	$18.44	$ 9.22	$ 9.22
$30.00	$22.13	$11.06	$11.07
$35.00	$25.81	$12.90	$12.91

Each insured sugar beet grower will receive from the Corporation prior to January 15, 1986 a statement of his sugar beet coverage in tonnes per acre as calculated for 1986.

2. Coverage - Each insured grower is given coverage equal to 80% of his own ten year yield per planted acre, as determined by the Corporation from production records obtained from the Manitoba Sugar Company. In the case of new growers with less than ten years production records, coverage will be established as follows:-

   (a) Coverage for growers with more than five years but less than ten years yield records will be determined on the basis of their average sugar beet yield for the number of crops produced.

   (b) Coverage for new growers with no yield records will be assigned at 8.7 tonnes per acre at the 80% coverage level. For each year of experience, up to and including five years, coverage will be increased or decreased according to the grower's yield records by not more than one half tonne per acre. Where coverage, based on the growers' yield, falls within the coverage limits thus established then this coverage will apply regardless of the number of years experience.

3. Coverage Stages - Coverage will apply in stages as the crop advances from planting to harvest. In each stage the

guarantee will be a percentage of the Insured's harvested stage coverage as follows:

Stage I (a) - 30% of harvested coverage with no thinning.

Stage I (b) - 50% of harvested coverage when stands have been thinned.

Stage I (c) - 40% of harvested coverage when planted to stand.

Reseeding Benefit - 15% of harvested coverage.

Stage II (a) - 40% of harvested coverage with no thinning.

Stage II (b) - 60% of harvested coverage when stands have been thinned.

Stage II (c) - 60% of harvested coverage when planted to stand.

Stage III - 75% of harvested coverage.

Stage IV - 100% of harvested coverage.

4. Stages Defined

Stages I (a) and II (a) apply to stands destroyed before thinning (ie. cannot be thinned to a stand worth maintaining because of poor germination, insect damage, adverse weather conditions, etc.). Stages I (b) and II (b) apply to stands which have been thinned prior to loss. Stages I (c) and II (c) apply to sugar beet crops planted to stand (no thinning required).

Stage I (a), I (b) and I (c) will not apply to the sugar beet crop if the sugar beet crop is worked down and the acreage is reseeded to sugar beets, except in the case where such reseeding of sugar beets is later than the final date of seeding for coverage to apply. If sugar beets are replanted on or before June 15 and a reseeding benefit is payable, the balance of sugar beet coverage will continue on the reseeded sugar beets. The grower must insure the reseeded crop if the same kind of insurable crop is already insured under the Contract of Crop Insurance for that year but such reseeded crop must be reseeded no later than the final date of seeding for that kind of insurable crop.

Reseeding Benefit - following a first stage inspection on or before June 25 the reseeding benefit relating to sugar beet coverage may be payable in accordance with section 7 (d) of the Contract of Crop Insurance.

In order to qualify for a reseeding benefit on sugar beets, the reseeded acreage must be in blocks of no less than 10 acres or be the total acres in that field.

Stage I - Crop destroyed up to and including June 25 when it is early enough to reseed to a substitute crop.

Stage I (a) - Crop not thinned before destroyed (not planted to stand).

Stage I (b) - Crop thinned before destroyed (not planted to stand).

Stage I (c) - Crop planted to stand (no thinning required).

Stage II - Crop destroyed after June 25 when it is too late to reseed to a substitute crop.

Stage II (a) - Crop not thinned before destroyed (not planted to stand).

Stage II (b) - Crop thinned before destroyed (not planted to stand).

Stage II (c) - Crop planted to stand (no thinning required).

Stage III - Loss of a properly cultivated, thinned and hoed stand, laid by for harvest that would have warranted maintaining after thinning and provided thinning was completed before July 23.

Also stands not harvested because of adverse weather conditions. A stand of beets which shows evidence of not having been a stand that would warrant maintaining at the time of thinning should have been reported in Stage II (a), and therefore, adjustment will be made as in Stage II (a).

Stage IV - Post Harvest stage - harvested and below coverage. A stand of beets which shows evidence of not having been a stand that would warrant maintaining at the time of thinning should have been reported in Stage II (a), and therefore, adjustment will be made as in Stage II (a).

5. Units of Production - For insurance purposes shall be tonnes.

6. Established Price - For insurance purposes in 1986 the following dollar values shall be: Low - $25.00/tonne; Medium - $30.00/tonne; High - $35.00/tonne (for the purpose of calculating dollar coverage and indemnity payments).

7. Quality Protection - Production will be adjusted for quality loss when the average quality is less than 125 kg sugar per tonne of sugar beets.

8. Insurance Period - Sugar beet insurance will apply from planting through harvest, provided beets are planted on or before June 15.

9. Eligibility of Insurance - Any sugar beet grower or group of growers in Manitoba who holds a contract with the Manitoba Sugar Company for the production of sugar beets and who intends to plant three (3) or more acres of sugar beets is eligible to apply for insurance on the total acreage of his sugar beet crop. Partnerships or grower groups will be required to insure the total acreage of sugar beets under a partnership Contract of Crop Insurance.

10. Insurance Coverage Shall Not Apply -

    (a) On sugar beet acreages of less than three acres in total.

    (b) On losses due to plant disease on acreages planted not in accordance with current field crop recommendations as published by the Minister of Agriculture in the booklet titled "Field Crop Recommendations for Manitoba" for sugar beets regarding rotations for disease control.

    (c) On sugar beet acreages planted after June 15.

11. Early Stage Loss Adjustments

    (a) A stand that would warrant maintaining after thinning refers to beets of sufficient size and number in the row to be worth keeping.

    (b) If part of a stand of sugar beets is lost in Stage I, Stage II or Stage III, an interim adjustment will be made on request, but an indemnity payment will not be made until harvest is completed when it can be determined if the final production is below the production guarantee.

    (c) If a field or part of a field is damaged in Stage I, Stage II or Stage III, the Insured must contact his agent immediately and ask for an inspection (if he wishes an interim adjustment). An adjustor must see the field while there is still evidence of the cause of damage. He must also be able to determine if there had been a sufficient stand to warrant maintaining after thinning.

(d) In all cases the Insured must have the field inspected by an employee of the Corporation before working it down; otherwise, insurance will not apply.

12. Good Experience Discount - Shall apply to premiums on sugar beets in the same way as to premiums on other crops.

13. Other Regulations - As laid down in the crop insurance contract will also apply to sugar beets insofar as they are applicable.

Schedule "A"

Being a Regulation Under The Crop Insurance Act Respecting Premium Rates and Coverages For A Pedigreed Alfalfa Seed Insurance Test Program for 1986

The following regulations will apply to a crop insurance program to provide coverage on pedigreed alfalfa seed crops in Manitoba:

1. Definition:

Alfalfa means alfalfa, Medicago species grown in Manitoba and harvested for the production of pedigreed seed and currently recommended in the booklet published annually by the Minister of Agriculture with the title, "Field Crop Recommendations for Manitoba".

2. Premium and Premium Rates

Every grower who insures a pedigreed alfalfa seed crop will pay the same dollar premium per acre within each dollar value selected. The premium rate will vary according to the coverage established by the Corporation for each grower on the basis of available production records. The premium per acre for pedigreed alfalfa seed insurance in 1986 will be as follows:

Dollar Selection Per tonne	Premium Paid By Insured Per Acre	Federal Contribution a 50% Per Acre	100% Premium Per Acre
$1,500.00	$6.94	$6.94	$13.88
$1,300.00	$6.02	$6.02	$12.04
$1,100.00	$5.09	$5.09	$10.18

3. Coverage

Each insured grower is given coverage equal to 70% of the ten year average pedigreed alfalfa seed yield assigned to him by the Corporation on the following basis:

(a) Growers who are insuring pedigreed alfalfa seed for the first time, will be assigned coverage of 0.065 tonnes per acre which is 70% of the ten year provincial average yield.

(b) Growers' actual yields will be added each successive year until coverage is on the basis of the grower's own average production over a ten year period.

4. Application for Pedigreed Alfalfa Seed Insurance

The pedigreed alfalfa seed crop must be added to an existing crop insurance contract or be included in the application for a new contract, not later than the 30th day of April of the new year in which the insurance coverage is to apply.

5. Eligibility to Insure

(a) Any pedigreed alfalfa seed grower in Manitoba who has five (5) or more acres of pedigreed alfalfa seed established is eligible to apply for insurance for the total pedigreed alfalfa seed crop.

(b) The variety insured must be eligible for certification as pedigreed seed in Canada.

(c) Growers must have a minimum of fifteen thousand (15,000) alfalfa leafcutter bees, Megachile rotundata (Fabricius) per acre in the alfalfa field by the 1st day of July of the coverage year.

6. Age of Stand for Insurance Purposes

(a) Year one (1) of the stand will be considered to be the first seed-producing year following establishment.

(b) Coverage is available for 1, 2, 3, 4 and 5 year old stands only.

7. Unit of Production - for insurance purposes shall be tonne.

8. Established Price - for insurance purposes there are three dollar values available in 1986 as follows:

Low - $1,100/tonne
Medium - $1,300/tonne
High - $1,500/tonne

for the purpose of calculating dollar coverage and indemnities.

9. Coverage Stages

One hundred per cent (100 %) coverage commences on the 1st day of May and will apply until such time as the crop has been harvested or destroyed (i.e. alfalfa crop damaged or destroyed during this period or crops not harvested due to adverse weather conditions).

10. Insurance Coverage Shall Not Apply:

(a) On acreages of less than five acres in total.

(b) On losses due to plant disease on acreages planted not in accordance with current field crop recommendations as published by the Minister of Agriculture in the booklet titled "Field Crop Recommendations for Manitoba" for alfalfa seed regarding rotations for disease control.

(c) On losses to numbers of alfalfa leafcutter bees by insecticides and/or other losses resulting from uninsured causes as determined by the Corporation. Losses of alfalfa seed production attributable to losses of alfalfa leafcutter bees by natural hazards beyond the control of the operator shall be covered.

(d) On acreage destroyed by the Insured before inspection by an authorized employee of The Manitoba Crop Insurance Corporation.

11. Determination of Production for Purposes of Evaluating Losses

(a) In cases where weeds are reducing the potential yield of alfalfa seed, an amount equal to the yield reduction due to weed competition will be appraised and charged as an uninsured cause of loss.

(b) Quality Guarantee - for the purpose of determining harvested production, the quality guarantee shall be a percentage germination of 70 or more. When the moisture content of alfalfa seed production is in excess of 10%, an amount equal to the moisture in excess of 10% will be deducted as dockage from the production to adjust the production to a dry weight basis.

(c) Requests for post harvest adjustments on alfalfa seed must be submitted to the agency in accordance with section 8 of the Contract of Crop Insurance, and before the production is moved to market in order that uncleaned samples can be obtained for moisture determination and germination tests.

12. Coverage for losses to alfalfa during the establishment year shall be available under the Forage Seed Establishment Option.

13. Hail and/or Fire Coverage

The hail spot loss coverage under the All-Risk Program is available for alfalfa seed insured under this regulation and shall be in force and effect from 12 noon of the 1st day of June. All other terms and conditions regarding the hail spot loss option coverage are as outlined in sections 23 and 24 of the Contract of Crop Insurance.

The premium rate for alfalfa seed shall be 2.0 x the premium rate shown for the respective risk areas set out in Schedule "Y" of Manitoba Revised Regulation C310-R2.

Hail coverage under Part II of The Crop Insurance Act will also be available for alfalfa seed at 2.0 times the basic premium rate, but only for those alfalfa seed crops which are insured under the All-Risk Program.

14. Experience Discount and Surcharge

Shall apply to premiums on alfalfa seed in the same way as to premiums on other insurable crops.

15. Other regulations as laid down in the Crop Insurance Contract will also apply to pedigreed alfalfa seed insofar as they are applicable.

SCHEDULE "A"

MANITOBA REGULATION /85
BEING A REGULATION UNDER THE CROP INSURANCE ACT RESPECTING INSURANCE COVERAGE FOR PEDIGREED TIMOTHY SEED TO AMEND MANITOBA REGULATION 271/84

Definitions:

1. In this Regulation -

   (a) "Insurable crop" includes Timothy grown for pedigreed seed production and for which premium rates and coverages are provided in the Regulation.

   (b) "Timothy" means Timothy varieties of the species *Phleum pratense* L. grown in Manitoba and harvested for the production of pedigreed seed and currently recommended in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba".

Regulations:

2. Coverage for losses to Timothy grown for pedigreed seed production under the all-risk contract, in addition to all other applicable conditions under the Contract of Crop Insurance, shall be subject to the following terms and conditions:

   (a) Eligibility to Insure:

      (i) All areas of the province eligible for wheat insurance under the all-risk contract shall be eligible for Timothy seed production insurance.

      (ii) Coverage is not available under this regulation unless the Insured has agreed to insure two kinds of insurable crops. If only two crops are insured, one crop must be other than soybeans, pedigreed Timothy seed or pedigreed alfalfa. The acreage requirements are as set out in section 6(4) of the Contract of Crop Insurance.

   (b) Coverage will only apply to Timothy seed crops fertilized according to recommendations outlined in the booklet published annually by the Minister of Agriculture with the title "Field Crop Recommendations for Manitoba" for the year in which coverage applies and for the area in which the crop is being grown.

(c) Coverage for Timothy grown for pedigreed seed production must be selected by the 30th day of April of the year in which coverage is to apply.

(d) Age of stand for insurance purposes:

(i) Year one (1) of the stand will be considered to be the first seed producing year following establishment.

(ii) Coverage is available for 1, 2, 3, 4 and 5 year old stands only.

(e) "Ground Cover" means the amount of soil surface that is covered by Timothy and;

(i) in solid seedings, coverage will cease once ground cover is less than seventy-five per cent (75%), or;

(ii) in row plantings, coverage will cease when more than twenty-five per cent (25%) of the rows are missing.

(f) Unit of Production for insurance purposes shall be tonne.

(g) Established Price - for insurance purposes, three dollar values are available in 1986 as follows:

Price #1 = $360.00 per tonne

Price #2 = $430.00 per tonne

Price #3 = $500.00 per tonne

to be used for the purpose of calculating dollar coverages and indemnities.

(h) Adjustments for losses will be made as follows:

(i) Coverage Stages - Pre-harvest coverage commences on the 1st day of May and will apply until such time as the crop has been harvested or destroyed (i.e. Timothy crops damaged or destroyed during this period or crops not harvested due to adverse weather conditions).

Post harvest applies to Timothy crops harvested and below coverages.

(ii) Production to count, for adjusting purposes shall be as follows:

Appraised or Harvested Production kg/acre		Production to Count kg/acre
over	and including	
0	30	0
30		ALL

(iii) In cases where weeds are reducing the potential yield of Timothy seed, an amount equal to the yield reduction due to weed competition will be appraised and charged as an uninsured cause of loss.

(iv) Quality Guarantee - for the purpose of determining harvested production, the quality guarantee shall be a percentage germination of 70 or more. When the moisture content of Timothy seed production is in excess of 10%, an amount equal to the moisture in excess of 10% will be deducted as dockage from the production to adjust the production to a dry weight basis.

(v) Requests for post harvest adjustments on Timothy seed must be submitted to the Agency in accordance with section 8 of the Contract of Crop Insurance, and before the production is moved to market in order that uncleaned samples for grading can be obtained.

3. Coverage for losses to Timothy during the establishment year shall be available under the Forage Seed Establishment Option.

4. Hail and/or Fire Coverage.

The hail spot loss coverage under the all-risk program is available for Timothy seed insured under this regulation and shall be in force and effect from 12 noon of the 1st day of June. All other terms and conditions regarding the hail spot loss option coverage are as outlined in section 24 of the Contract of Crop Insurance.

The premium rate for Timothy seed shall be 1.5 x the premium rate shown for the respective risk areas set out in Schedule "Y" of Manitoba Revised Regulation C310-R2.

Hail coverage under Part II of The Crop Insurance Act will also be available for Timothy seed, but only for those Timothy seed crops which are insured under the all-risk program.

5. Experience Discounts shall apply to premiums on Timothy seed in the same way as to premiums on other insurable crops.

6. Coverages and premium rates for pedigree Timothy seed production shall be as set out in Schedule "AC-1".

7. Manitoba Regulation 271/84 is repealed.

Schedule "A"

MANITOBA REGULATION /85
BEING A REGULATION UNDER THE CROP INSURANCE ACT RESPECTING INSURANCE COVERAGE FOR DESIGNATED FORAGE CROPS FOR SEED PRODUCTION DURING THE PERIOD OF ESTABLISHMENT

Definitions

1. In this Regulation,

   (a) "Establishment" refers to the time between seeding a forage crop for seed production and the earlier of:

      (i) until a 75% ground cover is established, or the 31st day of October of the same year in the case of spring plantings, and

      (ii) until a 75% ground cover is established, or the 31st day of May in the following year in the case of fall plantings.

   (b) "Companion Crop" refers to any annual spring sown crop seeded with the forage crop during establishment. A crop sown with a forage crop in the fall which will not overwinter to grow in competition with the forage crop grown for seed production the following year will not be considered a companion crop under this option.

Regulations

2. Coverage for losses to forage crops grown for seed production during establishment under the all-risk contract shall be subject to the following additional terms and conditions:

   (a) Eligibility to insure under the Forage Seed Establishment Option will be limited to those farmers accepted by The Manitoba Crop Insurance Corporation for forage seed production insurance and shall be limited to those types of forage seed crops eligible for coverage for seed production under the all-risk program.

   Insureds not having forage seed production insurance coverage during the time forage seed establishment coverage is being requested must apply for forage seed insurance for the next forage seed insurance year.

   (b) To be eligible for coverage, all acres of new forage seed plantings intended for forage seed production in the following year must be insured and the total acres so insured must not be less than 5 acres.

(c) To be eligible for coverage, eligible grasses and/or legumes for spring planting must be planted on or before the 10th day of June and eligible grasses for fall planting must be planted, when moisture supplies are adequate, on or after the 1st day of August but not later than the 31st day of August.

(d) Establishment Coverage will not apply:

   (i) When the acres planted were intended for ploughdown or forage production rather than for forage seed production.

   (ii) When the loss of stand is caused by improper management, such as: incorrect seed placement, heavy competition from weeds or heavy competition from a companion crop.

(e) Coverage under the Forage Seed Establishment Option must be selected by the Insured under his contract on or before the 30th day of April of the same year for spring and/or fall forage plantings.

(f) Two dollar options are available under the Forage Seed Establishment Option. Insureds must select either the high or the low dollar option and the dollar option selected shall be the same for all crops so insured under this option.

(g) Adjustments for losses will be made as follows:

   (i) A 75% ground cover is considered an adequate stand. No indemnity will be paid on stands where the ground cover is 75% or greater.

   (ii) Full coverage will be awarded on acreage which does not warrant keeping and is to be destroyed. Fifty per cent coverage will be awarded on acreage that has been thinned by an insured peril to the extent that it is necessary to overseed.

   (iii) Following initial inspection and consent by the Corporation, payment will only be made after the Corporation has received satisfactory evidence that the acreage has been destroyed in the case of 100% payment or, after the Corporation has received satisfactory evidence of reseeding in the case of acreage found necessary to overseed (50% payment).

   (iv) Following the initial inspection, should crop conditions change so that the forage stand improves or deteriorates to the extent that it qualifies for a different category (0%, 50% or 100% indemnity) the Corporation may, at its option, revise the initial inspection.

(v) No indemnity will be paid if the affected acreage is in blocks of less than 5 acres unless the damaged acreage is the total acreage of that crop in that field.

3. The premium is deemed earned on acres:-

(a) where a potential 75% ground cover exists.

(b) where a 100% payment has been awarded.

(c) where a 50% overseeding benefit has been awarded.

(d) which qualify for 100% payment but have not been destroyed on or before the 10th day of June of the year following in the case of spring plantings or on or before the 15th day of October of the year following in the case of fall plantings.

(e) which qualify for 50% overseeding benefit but have not been overseeded on or before the 10th day of June of the year following in the case of spring plantings or on or before the 31st day of August of the year following in the case of fall plantings.

The final dates to qualify for overseeding and/or 100% indemnity may be extended, where necessary, at the option of the Corporation.

4. Acres qualifying for a 50% overseeding benefit are eligible for establishment coverage until a 75% ground cover is achieved. A separate premium shall be earned on those acres requiring establishment coverage for each new term of insurance.

5. Establishment coverages, premium rates and premiums shall be as set out in Table 1.

6. This Regulation comes into effect on the day it is filed with the Registrar of Regulations.

TABLE 1

SCHEDULE "A"
MANITOBA REGULATION /85
BEING A REGULATION UNDER THE CROP INSURANCE ACT RESPECTING INSURANCE COVERAGE FOR CULTIVATED FORAGE FOR HAY PRODUCTION TO AMEND MANITOBA REGULATION 164/77 AND TO REPEAL MANITOBA REGULATIONS 137/78, 143/80 AND 263/83

Definitions:

1. In this Regulation -

   (a) "Insurable Crop" includes cultivated forage grown for hay production only and for which rates and coverages are provided in the Regulations.

   (b) "Cultivated Forage" means alfalfa, sweet clover or grasses which are planted for the purpose of growing hay and which are recommended annually by Manitoba Agriculture in the booklet with the title "Field Crop Recommendations for Manitoba". Native species (e.g. slough grass, couch grass, etc.) which are utilized to produce hay are not eligible for coverage under the program.

   (c) "Coverage Adjustment" means the adjustment in coverage applicable to an Insured as determined by relating the Insured's actual loss ratio experience, number of years insured and number of loss years to the appropriate tables set out in Schedule "B".

Regulations:

2. Coverage for losses to cultivated forage grown for hay production under the all-risk contract, in addition to all other applicable conditions under the all-risk contract, shall be subject to the following terms and conditions:

   (a) Eligibility to insure under the cultivated forage program will be limited to those farmers accepted by the Corporation for such coverage who seed that crop for hay production.

   (b) Coverage will be available on the following cropping procedures:

      (i) Alfalfa - pure stands of alfalfa or stands of alfalfa and any other cultivated forage in which alfalfa comprises more than 60 per cent of the stand.

      (ii) Alfalfa Grass Mixtures - mixed stands of alfalfa and cultivated grasses in which the alfalfa comprises 25 to 60 per cent of the stand. Those stands with less than 25 per cent alfalfa in the stand will be considered as grass stands and those with more than 60 per cent alfalfa in the stand will be considered alfalfa stands.

(iii) Grasses - all cultivated grass species for hay production which have less than 25 per cent alfalfa in the stand.

(iv) Sweet Clover - pure stands of sweet clover will have the same coverage as alfalfa grass mixtures.

(c) Coverage under the cultivated forage program must be selected by August 31 for coverage to apply for the ensuing year.

(d) Age of stand for insurance purposes - year one (1) of the stand will be considered to be the first year following establishment.

(e) Coverage is available as follows:

Alfalfa - coverage is available for 1, 2 or 3 year old stands. Coverage will be extended beyond the third year on a yearly basis provided an inspection has been made and the stand is satisfactory to the Corporation.

Alfalfa grass mixtures and grasses grown alone - coverage is available for 1, 2, 3, 4 and 5 year old stands. Coverage will be extended beyond the fifth year on a yearly basis provided an inspection has been made and the stand is satisfactory to the Corporation.

Sweet clover - coverage is available for the year following establishment only.

(f) "Ground Cover" means the amount of soil surface that is covered by cultivated forage and;

(i) in solid seedings, coverage will cease once ground cover is less than seventy-five per cent (75%), or;

(ii) in row plantings coverage will cease when more than twenty-five per cent (25%) of the rows are missing.

(g) No insurance coverage will be applicable to that portion of cultivated forage where loss has occurred to:

(i) infestations of noxious weeds so severe as to reduce production, or;

(ii) over-grazing by livestock in fall and spring, or;

(iii) quality losses due to poor management, e.g. late cutting.

(h) All coverage on cultivated forage will cease once that crop has left the windrow.

(i) All new contracts must be inspected by The Manitoba Crop Insurance Corporation prior to acceptance of the application. All newly established stands with insurance coverage will be inspected in the year of establishing the stands and established stands will be inspected following the third year of production in the case of alfalfa and the fifth year of production in all other cases, when extension of insurance is requested, to confirm the condition and makeup of the stand.

(j) To be eligible for insurance on cultivated forage, an Insured must insure all eligible cultivated forage grown for hay production and the total acres of such insured cultivated forage must not be less than 5 acres.

(k) Adjustment for losses will be made as follows:

Adjustment I - Losses during the first cut will be adjusted as fifty per cent (50%) of harvested coverage up to July 10 if land is put to other use. Losses by winter kill will be adjusted on the basis of full harvested coverage at all times.

Adjustment II - Full harvested coverage commences on July 11 and all first cut and second cut production will be adjusted on this basis. Sweet Clover will be adjusted at full harvested coverage at all times.

Field Appraisals - If cultivated forage is to be cut and mixed with other crops for silage an appraisal will be made on the standing crop. Alfalfa sold to dehydration plants will have production converted to air dry basis. If cultivated forage is cut prior to appraisal and mixed with other crops prior to the appraisal, the appraised production for indemnity purposes will be based on the long term average yield for the soil zone in the risk area for the acreage which the forage crop is cut.

(l) In the event cutting of cultivated forage is not completed until after the mature seed stage of such cultivated forage, by reason of one or more insured causes to establish any loss the Insured will receive an adjustment for quality by reducing the Insured's determined actual production by fifteen per cent (15%) on so much thereof which could not have been cut prior to such stage.

(m) Distant unit and landlord provisions will not apply to cultivated forage but experience discount and coverage adjustment will apply and will be established on the experience of cultivated forage.

(n) The Insured's coverage for each acre of forage crop shall be determined by adding to or subtracting from the number indicated in the tables set out in Schedules "01" to "015" inclusive and Schedules "016" to "030" inclusive for the designated coverage level (70 per cent) under the columns headed Coverage Tonnes Per Acre in respect of the soil zone and risk area in which the acre is situated, the coverage adjustment as determined by tables set forth in Schedule "B".

(o) If a forage crop endorsement is completed and a Forage Seeded Acreage Report/Inspection Form is completed establishing the acreage for insurance, the coverage is in force and the premium is deemed earned for the ensuing year if the Contract is still in force after January 31 of that year.

(p) Under the hail spot loss option, forage for hay production coverage shall apply as follows:

Coverage for indemnity purposes for forage crops for hay production, excepting sweet clover, shall be based on fifty per cent (50%) of the full coverage available up and to including July 10 and first cut in the case of the Insured having completed first cut, whichever occurs first; and after first cut has been harvested. If forage for hay production, excepting sweet clover, is hailed on or after July 11 and prior to first cut being harvested, the coverage available for indemnity purposes shall be based on full coverage. Sweet clover for hay production coverage for indemnity purposes shall be based on full coverage.

(q) Coverages, premium rates and premiums shall be as set out in Schedules.

SCHEDULE "B"

COVERAGE ADJUSTMENT

1. "Coverage Adjustment" means the adjustment in coverage applicable to an Insured as determined by relating the Insured's actual loss ratio experience, number of years insured and number of loss years to the appropriate tables set out in this Schedule.

2. Tables I and II shall be used to determine the coverage adjustment increase when an Insured's loss ratio is 1.60 or less as of the end of the 1984 crop year.

3. Tables I and III shall be used to determine the coverage adjustment decrease when an Insured's loss ratio is 1.61 or greater as of the end of the 1984 crop year.

TABLE 1

FORAGE COVERAGE ADJUSTMENT CONSTANTS
AT THE 70% COVERAGE LEVEL

	TONNES PER ACRE INCREASED COVERAGE FOR LOSS RATIO 0.00 TO 1.60	TONNES PER ACRE DECREASED COVERAGE FOR LOSS RATIO 1.61 OR MORE
CROP	70%	70%
ALFALFA	0.49	0.44
ALFALFA-GRASS MIXTURE	0.47	0.35
GRASS	0.57	0.32
SWEET CLOVER	0.47	0.35

NOTE:

Tables II and III are in the coverage adjustment section for regular crops after the section on the Contract of Crop Insurance.

Schedule "A"

MANITOBA REGULATION /85
BEING A REGULATION UNDER THE CROP INSURANCE ACT RESPECTING INSURANCE COVERAGE FOR DESIGNATED CULTIVATED FORAGE CROPS FOR HAY PRODUCTION DURING THE PERIOD OF ESTABLISHMENT

Definitions

1. In this Regulation,

   (a) "Establishment" refers to the time between seeding a forage crop and the earlier of:

      (i) until a 75% ground cover is established, or the 31st day of October of the same year in the case of spring plantings, and

      (ii) until a 75% ground cover is established, or the 31st day of May in the following year in the case of fall plantings.

   (b) "Companion Crop" refers to any annual spring sown crop seeded with the cultivated forage crop during establishment. A crop sown with cultivated forage crop in the fall which will not overwinter to grow in competition with the forage the following year will not be considered a companion crop under this option.

Regulations

2. Coverage for losses to cultivated forage crops for hay production during establishment under the all-risk contract shall be subject to the following additional terms and conditions:

   (a) Eligibility to insure under the Forage Hay Establishment Option will be limited to those farmers accepted by The Manitoba Crop Insurance Corporation for cultivated forage insurance and shall be limited to those types of forage crops eligible for coverage under the Cultivated Forage program.

   Insureds not having cultivated forage insurance coverage during the time forage hay establishment coverage is being requested must apply for cultivated forage insurance for the next forage insurance year and sign an endorsement of intent to insure all eligible stands for that year before coverage can be granted under the establishment option.

   (b) To be eligible for coverage, all acres of new forage plantings must be insured and the total acres so insured must not be less than 5 acres.

(c) To be eligible for coverage, eligible grasses and/or legumes for spring planting must be planted on or before the 10th day of June and eligible grasses for fall planting must be planted, when moisture supplies are adequate, on or after the 1st day of August but not later than the 31st day of August.

(d) Establishment Coverage will not apply:

  (i) When the acres planted were intended for plough-down rather than for forage.

  (ii) When the loss of stand is caused by improper management, such as: incorrect seed placement, heavy competition from weeds or heavy competition from a companion crop.

(e) Coverage under the Forage Hay Establishment Option must be selected by the Insured under his contract on or before the 30th day of April of the same year for spring and/or fall forage plantings.

(f) Two dollar options are available under the Forage Hay Establishment Option. Insureds must select either the high or the low dollar option and the dollar option selected shall be the same for all crops so insured under this option.

(g) Adjustments for losses will be made as follows:

  (i) A 75% ground cover is considered an adequate stand. No indemnity will be paid on stands where the ground cover is 75% or greater.

  (ii) Full coverage will be awarded on acreage which does not warrant keeping and is to be destroyed. Fifty per cent coverage will be awarded on acreage that has been thinned by an insured peril to the extent that it is necessary to overseed. The overseeding benefit does not apply to sweet clover as it is a biennial crop.

  (iii) Following initial inspection and consent by the Corporation, payment will only be made after the Corporation has received satisfactory evidence that the acreage has been destroyed in the case of 100% payment or, after the Corporation has received satisfactory evidence of reseeding in the case of acreage found necessary to overseed (50% payment).

(iv) Following the initial inspection, should crop conditions change so that the forage stand improves or deteriorates to the extent that it qualifies for a different category (0%, 50% or 100% indemnity) the Corporation may, at its option, revise the initial inspection.

(v) No indemnity will be paid if the affected acreage is in blocks of less than 5 acres unless the damaged acreage is the total acreage of that crop in that field.

3. The premium is deemed earned on acres:-

(a) where a potential 75% ground cover exists.

(b) where a 100% payment has been awarded.

(c) where a 50% overseeding benefit has been awarded.

(d) which qualify for 100% payment but have not been destroyed on or before the 10th day of June of the year following in the case of spring plantings or on or before the 15th day of October of the year following in the case of fall plantings.

(e) which qualify for 50% overseeding benefit but have not been overseeded on or before the 10th day of June of the year following in the case of spring plantings or on or before the 31st day of August of the year following in the case of fall plantings.

The final dates to qualify for overseeding and/or 100% indemnity may be extended, where necessary, at the option of the Corporation.

4. Acres qualifying for a 50% overseeding benefit are eligible for establishment coverage until a 75% ground cover is achieved. A separate premium shall be earned on those acres requiring establishment coverage for each new term of insurance.

5. Each Insured's experience under this option will be incorporated into the coverage adjustment and premium discount or surcharge calculations for the Cultivated Forage Program.

6. Table 1 of Manitoba Regulation 266/83 as amended by Manitoba Regulation 273/84 is repealed and the Table 1 attached hereto substituted therefor.

7 Manitoba Regulation 273/84 is repealed.

Your coverage will be allocated to the municipality shown above.

GUARANTEE OF CORPORATE INSURANCE DEBT

The undersigned, being a principal of ______________________, in consideration of The Manitoba Crop Insurance Corporation granting insurance to the applicant, do hereby for myself, my heirs, executors and administrators, (and where there are more than one undersigned guarantor, jointly and severally) unconditionally guarantee the payment when due of all premiums and interest thereon, if applicable, owing to The Manitoba Crop Insurance Corporation by the applicant from time to time.

Date ______________________

I acknowledge that the premium for the livestock insured under this application is due and payable and that I am eligible for a 5% discount if payment of the premium is made in full at the time of application.

If premium is not paid in full at the time of application, I promise to pay The Manitoba Crop Insurance Corporation the said premium or portions thereof plus interest from September 1 of that year until paid, at the rate equivalent to one percentage point greater than the prime interest rate of the Bank of Canada, effective on June 1 for the crop year for which the premium is due.

I declare that the statements made herein are true and correct. Upon acceptance of this application by The Manitoba Crop Insurance Corporation, I hereby agree to the terms and conditions on the reverse side of this application.

TERMS AND CONDITIONS

1. Under the Livestock Feed Security Program the following terms mean:

   (a) "average yield" - yield per acre as established from historical data and actual yields of selected forage producers in an area.
   (b) "actual yields" - measured forage production of selected forage producers in an area.
   (c) "selected forage producers" -are forage producers selected by the Corporation as representative in an area from which actual and historical yields are obtained by the Corporation to ascertain a reliable average yield for an area.
   (d) "dollar coverage selection" - the dollar value per animal selected by the producer which best represents the producer's cost of forage for overwintering each animal insured.
   (e) "insurable animal" - means cow, bull, feeder steer or heifer, P.M.U. horse, sheep or goat as of November 30 of the coverage year.
   (f) "cow" - adult cow which has calved at least once or a pregnant heifer which will calve by November 30 of the coverage year.
   (g) "bull" - of breeding age by November 30 of the coverage year.
   (h) "steer or heifer" - all those over 400 pounds by November 30 of the coverage year.
   (i) "P.M.U. horse" - a stallion or pregnant mare to be overwintered.
   (j) "sheep or goat" - all sheep or goats to be overwintered.
   (k) "fodder supplies" - means that livestock feed except cereal and legume grains used for overwintering animals.

2. All livestock producers who own and are overwintering one or more insurable animals will be eligible to insure under the Livestock Feed Security Program.

3. To be eligible for coverage the total number of each type of animal selected and being overwintered must be insured.

4. Losses will be determined on a Rural Municipality or Local Government District basis and the Corporation agrees to pay the producer for each animal insured on the following basis:

   If the average of actual yields of selected forage producers in the producer's municipality falls below 70% of the eight year average yield in the municipality, the Corporation will pay the insured livestock producer 2% of the selected dollar coverage for each 1% that the average of such actual yields in the insurance year is below 70% of the eight year average yield of forage in that municipality.

5. Coverage shall be in dollars per animal. Coverage selections are available under the Livestock Feed Security Program. Only one dollar selection may be chosen for each type of animal.

6. Premium rates and dollar coverages shall be as established annually.

7. The Corporation shall have complete access to all livestock facilities of the insured livestock producers and information as to location of insured animals during the term of this Contract.

8. March 31 will be the final date for applying for a Livestock Feed Security Program Contract.

9. Experience discounts or surcharges and coverage adjustment under the All-Risk Contract do not apply to livestock feed security insurance. Any payouts under the Livestock Feed Security Program will not affect any All-Risk experience discount or surcharges.

10. If the premium is paid when the application is made a 5% discount is allowed on the basic premium. Interest on such premium or any portion thereof is payable from September 1 of that year until paid, at the rate equivalent to one percentage point greater than the prime interest rate of the Bank of Canada, effective on June 1 for the crop year for which the premium is due.

11. When any monies are owing under any insurance contract or programs administered by the Corporation, the Corporation may deduct the amounts of same from any monies payable to the livestock producer.

12. Where, in the application for insurance, the livestock producer falsely describes the source of fodder supplies, or number of animals to be overwintered to the prejudice of the Corporation, or knowingly misrepresents or fails to disclose in the Application any facts required to be stated therein, the insurance or such part as may be designated by the Corporation, at the option of the Corporation, shall be void for the year during which the misdescription, misrepresentation or omission is made but the premium paid for such year shall have been deemed to be earned by the Corporation.

13. This Livestock Feed Security Insurance Contract is a one year contract from April 1 of a current year to March 31 of the following year, and automatically renews for a further one year and from year to year thereafter at the same total number of animals, dollar coverage, municipality previously selected unless notice of cancellation or change is given in writing toThe Manitoba Crop Insurance Corporation on or before March 31 in any contract year, or unless the premium is not paid as provided in paragraph 14.

14. If the Insured has not paid the insurance premium by March 15 of the contract year, then this contract shall be deemed to have ceased to be in effect after March 31 of that year. To obtain a new contract, after March 15 but before March 31, a new application is required along with payment of any outstanding premium plus accrued interest, plus an application fee, if one is required.

15. The Corporation may alter the terms and conditions of this continuous contract by notifying the insured producer prior to January 15 of each insurance year.

16. An Insured who is in arrears upon premiums which are due on any other Crop Insurance Contract may be cancelled by the Corporation at any time and any claims arising in that year are not payable but premiums for the year are deemed earned.

17. The producer may assign the right of any indemnity under this contract but any such assignment shall be in a form approved by the Corporation and shall not be binding on the Corporation until accepted in writing by the Corporation.

HONEY INSURANCE PROGRAM FOR 1986

The following will apply to a crop insurance program to provide coverage on honey in Manitoba:

1. Definitions Section

"designated perils" - means all natural hazards beyond the Insured's control including hail, frost, drought, excessive moisture, flood, wind, disease except American Foulbrood disease, insect pests and wildlife.

"insurable crop" - honey from a producing colony of bees.

"producing colony" - shall be colonies used solely for the purpose of producing honey and shall consist of not less than 20,000 bees as of June 30 in the year in which coverage is to apply.

"test area" - means all of Manitoba.

2. Premium and Premium Rate

Every beekeeper who insures their honey will pay the same premium per colony within a given honey region for a given dollar value selection. The premium rate will vary according to the coverage established by the Corporation for each beekeeper on the basis of available production records. The premium per colony for honey insurance in 1986 will be as follows:

DOLLAR VALUE	HONEY REGION	PREMIUM PAID BY INSURED PER COLONY	FEDERAL CONTRIBUTION @ 50% PER COLONY	100% PREMIUM PER COLONY
$1.10/kg	Central	1.47	1.47	2.94
	Interlake	1.39	1.39	2.78
	Northwest	1.36	1.36	2.72
	Eastern	1.11	1.11	2.22
	Southwest	1.30	1.30	2.60
$ .95/kg	Central	1.27	1.27	2.54
	Interlake	1.20	1.20	2.40
	Northwest	1.17	1.17	2.34
	Eastern	.96	.96	1.92
	Southwest	1.13	1.13	2.26
$ .80/kg	Central	1.07	1.07	2.14
	Interlake	1.01	1.01	2.02
	Northwest	.99	.99	1.98
	Eastern	.80	.80	1.60
	Southwest	.95	.95	1.90

3. Coverage

Each insured beekeeper is given coverage equal to 70% of the ten year average honey yield assigned to them by the Corporation on the following basis:

> Beekeepers for whom no records of production are available for any of the previous ten years, who are insuring honey for the first time, will be assigned a yield for coverage purposes, equal to the past ten year yield for honey in the appropriate honey region. Ten year average honey yields by honey region are as follows:

AVERAGE YIELD PER COLONY BY HONEY REGION

REGION	YIELD (Kg)	COVERAGE PER COLONY (kg)
Central	74	52
Interlake	70	49
Northwest	69	48
Eastern	56	39
Southwest	66	46

4. Eligibility for Insurance

Partnerships or producer groups will be required to insure the total number of colonies under a partnership contract of crop insurance, i.e. the total number of colonies cannot be split and a portion insured by each of the partners under their own Honey Insurance Contract.

5. Requirements for Insurance and Insurance Period

The Insured must report all carryover honey and submit a Producing Colonies Report listing all producing colonies and their location by June 30. Inspection of colonies may be carried out following the Insured's submission of their Producing Colonies Report.

6. Unit of Production - for insurance purposes shall be kilogram.

7. Established Price - for insurance purposes, the dollar value for honey will be $1.10/kg for the high dollar value selection, $ .95/kg for the medium dollar value selection, $ .80/kg for the low dollar value selection.

8. Determination of Production for Purposes of Evaluating Losses

Coverage as calculated for each insured beekeeper is based on the yield of extractable honey. Records of production and such other receipts as required will be made available to the Corporation annually so that total production, and total colonies may be determined to the satisfaction of the Corporation.

Indemnities will be determined on the basis of the Insured's total production guarantee less extractable production of marketable honey.

9. The Honey Insurance Contract will be in the form attached as Schedule A.

Schedule "W"

1986 Unseeded Acreage Insurance Program

Definition

1. In this Regulation,

"Cultivated Land" means land ready for annual crop production on or before the 25th day of June in the crop year for which coverage is to apply but does not include:

(i) land under bush or brush, sod, pasture, perennial forage or fall rye;

(ii) land broken out of bush or brush, sod, pasture or perennial forage after the 1st day of August of the previous year;

(iii) land on which an unseeded acreage indemnity was paid the previous year and has not dried sufficiently to be worked prior to the 15th day of August in the previous year.

Regulations

2. The insurable acres for unseeded acreage insurance shall be the total acres of the Insured's cultivated land, less a deductible summerfallow percentage, as specified below:

(i) An Insured, who has completed research questionnaires for the last 4 years used to establish risk area deductible summerfallow percentages, shall be eligible for the deductible based on the average of the Insured's summerfallow percentages for the 4 years.

(ii) An Insured, who has completed 1 or more research questionnaires during the last 4 years used to establish risk area deductible summerfallow percentages, shall be eligible for the deductible based on the average of the Insured's summerfallow percentages for the years questionnaire information is available and the risk area summerfallow percentages for the missing years as set out in Table 1.

(iii) An Insured, who has not completed any research questionnaires during the last 4 years used to establish risk area deductible summerfallow percentages, shall be assigned the deductible summerfallow percentage, as set out in Table 1, for the risk area in which the majority of the declared acres are situated.

3. Eligibility to Insure

All contract holders excluding landlord contract holders, are eligible for unseeded acreage insurance.

4. Coverage Options

(a) Three dollar options are available for selection and the respective dollar coverages per acre, by soil zones, are as follows:

Dollar Options	Soil Zones A to H	Soil Zones I and J
1. Low dollar selection	$15.00	$10.00
2. Medium dollar selection	$20.00	$15.00
3. High dollar selection	$25.00	$20.00

The dollar selection (high, medium or low) establishes the amount per acre at which an indemnity will be paid and with respect to the soil zones in which the acres are situated.

(b) One coverage level, 80% of acres intended for planting (Total Cultivated Acres - Summerfallow Deductible), is offered and this coverage level establishes the acres insured on which an indemnity will be paid.

5. Premiums

Premiums are payable on the insurable acres in accordance with the coverages and premium rates set out in Schedule "W-1".
